*Clamator glandarius* is a widespread summer visitor to southern Europe, which accounts for less than a quarter of its global breeding range. Its European breeding population is relatively small (<77,000 pairs), but increased between 1970–1990. Although the trend of the stronghold population in Spain during 1990–2000 was unknown, the species was stable or increased across the rest of its European range, and is provisionally evaluated as Secure.
