Global IUCN Red List Category —
Criteria —

Cuculus canorus is a widespread summer visitor to Europe, which accounts for less than half of its global breeding range. Its European breeding population is very large (>4,200,000 pairs), and was stable between 1970–1990. Although there were declines in many western populations—most notably France—during 1990–2000, most populations in the east, including key ones in Russia and Romania, were stable, and the species underwent only a slight decline overall. Consequently, it is evaluated as Secure.

Country	Breeding pop. size (pairs)	Year(s)	Trend	Mag. %	References
