**Strix uralensis**

**URAL OWL**

**Non-SPEC** (1994: —) **Status** (Secure)  
**Criteria** —  
**European IUCN Red List Category** —  
**Global IUCN Red List Category** —  

*Strix uralensis* is a widespread resident across much of northern and parts of central Europe, which accounts for less than a quarter of its global range. Its European breeding population is relatively small (<140,000 pairs), but was stable between 1970–1990. The species remained stable overall during 1990–2000, with no significant change in the stronghold population in Russia, and stable or increasing trends elsewhere within its European range. Consequently, it is provisionally evaluated as Secure.

**Strix nebulosa**

**GREAT GREY OWL**

**Non-SPEC** (1994: —) **Status** (Secure)  
**Criteria** —  
**European IUCN Red List Category** —  
**Global IUCN Red List Category** —  

*Strix nebulosa* is resident in the boreal zone of Europe, which accounts for less than a quarter of its global range. Its European breeding population is small (as few as 2,100 pairs), but was broadly stable between 1970–1990. No trend was available for the key population in Russia during 1990–2000, but the species probably remained broadly stable overall. Although the size of the European population could render it susceptible to the risks affecting small populations, it is marginal to a much larger non-European population. Consequently, the species is provisionally evaluated as Secure.
