*Tringa stagnatilis* is a summer visitor to central Russia and parts of eastern Europe, which accounts for less than half of its global breeding range. Its European breeding population is relatively small (<32,000 pairs), but increased substantially between 1970–1990. Although some marginal populations were stable or increased during 1990–2000, the species declined in its Russian stronghold, and underwent a moderate decline (>10%) overall. Nevertheless, this decline is probably outweighed by the earlier increase, and consequently it is provisionally evaluated as Secure.

Country	Breeding pop. size (pairs)	Year(s)	Trend	Mag. %	References
Belarus	<b>40 – 70</b>	96–00	+	10–19	
Finland	0 – 5	98–02	0	0–19
