Tringa nebularia is a widespread breeder in northern Europe, which accounts for less than a quarter of its global breeding range. Its European breeding population is relatively small (<160,000 pairs), but was stable between 1970–1990. Although the species declined in the United Kingdom during 1990–2000, populations in the rest of its European range were stable or increased, and the species remained stable overall. Consequently, it is evaluated as Secure.

Country	Breeding pop. size (pairs)	Year(s)	Trend	Mag.%	References
