Tringa ochropus is a widespread breeder in northern and central Europe, which accounts for less than half of its global breeding range. Its European breeding population is large (>330,000 pairs), and was stable between 1970–1990. The species remained stable overall during 1990–2000, with all national trends either stable, fluctuating (as in the Russian stronghold) or increasing. Consequently, the species is evaluated as Secure.
