Criteria —

Serinus corsicana is endemic to Europe, where it is confined to the Mediterranean islands of Sardinia, Corsica, Capraia and Elba. It was formerly treated as a subspecies of *S. citrinella*, but is now considered to be a species in its own right. Its breeding population is relatively small (<85,000 pairs), but was probably stable during 1990–2000. Consequently, the species is provisionally evaluated as Secure.

Country	Breeding pop. size (pairs)	Year(s)	Trend	Mag.%	References
France	15,000 – 75,000	98–02	(0)	(0–19)	4
Italy	(4,000 – 10,000)	03	(0)	(0–19)	
Total (approx.)	19,000 – 85,000	Overall trend Stable			
Breeding range	>50,000 km²	Gen. length. <3.3 % Global pop. 100
