

Vanellus vanellus

NORTHERN LAPWING

SPEC 2 (1994: —) **Status** Vulnerable

Criteria See IUCN below

European IUCN Red List Category VU

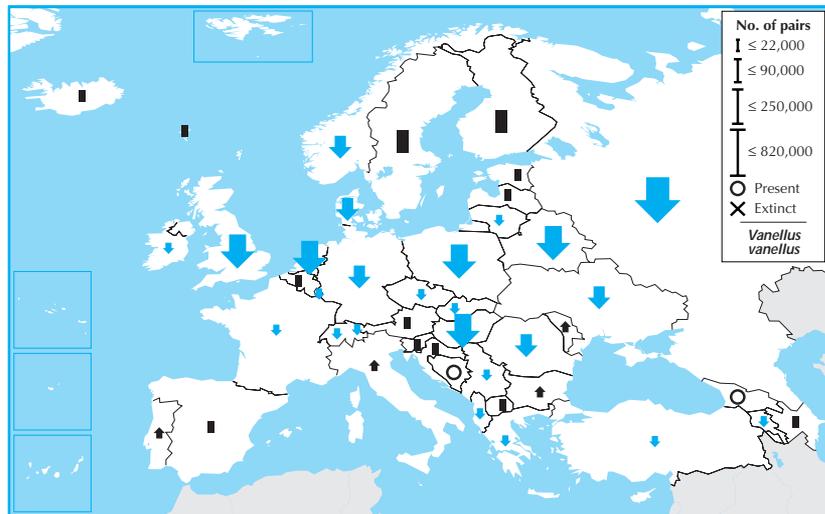

Criteria A2b; A3b,c

Global IUCN Red List Category —

Criteria —

Vanellus vanellus is a widespread breeder across most of Europe, which probably holds >50% of its global population. Its European breeding population is very large (>1,700,000 pairs), and was stable between 1970–1990. Although several small populations were stable or increased during 1990–2000, the species suffered declines across much of Europe—most notably sizeable populations in the United Kingdom, Netherlands and Russia—and underwent a large decline (>30%) overall. Consequently, this previously Secure species is now evaluated as Vulnerable.

Country	Breeding pop. size (pairs)	Year(s)	Trend	Mag.%	References
