Global IUCN Red List Category —

Criteria —

Stercorarius longicaudus breeds in Greenland, Svalbard, Fennoscandia and arctic Russia, with Europe accounting for less than a quarter of its global breeding range. Its European breeding population is relatively small (<78,000 pairs), but was broadly stable between 1970–1990. Trend data were not available for the key populations in Russia and Greenland during 1990–2000, but populations were broadly stable elsewhere in Europe, and consequently the species is provisionally evaluated as Secure.

| Country | Breeding pop. size (pairs) | Year(s) | Trend | Mag.% | References |
|------------------------|-----------------------------------|---------|----------------------|--------------------|---------------------------|
| Denmark | | | | | |
| Greenland | (1,000 – 20,000) | 90–00 | ? | – | |
| Finland | 100 – 2,000 | 98–02 | F | >80 | |
