*Branta canadensis* has a predominantly North American breeding distribution, which just extends into Europe in western Greenland. The native European breeding population is small (as few as 2,500 pairs), and its trend between 1970–1990 was unknown, but it underwent a small increase during 1990–2000. Although the size of the non-feral European population could render it susceptible to the risks affecting small populations, it is marginal to a much larger non-European population. Consequently, the species is provisionally evaluated as Secure.

Country	Breeding pop. size (pairs)	Year(s)	Trend	Mag. %	References
Denmark					
Greenland	(2,500 – 10,000)	95–00	(+)	(0–19)	9
Total (approx.)	2,500 – 10,000		Overall trend	Small increase	
Breeding range	>20,000 km <sup>2</sup>		Gen. length	7	% Global pop. <5
