Global IUCN Red List Category —

Criteria —

Garrulus glandarius is a widespread resident across most of Europe, which accounts for less than half of its global range. Its European breeding population is very large (>6,000,000 pairs), and was stable between 1970–1990. Although there were declines in a few countries during 1990–2000, populations across the vast majority of Europe—including key ones in France, Russia and Turkey—were stable or increasing, and the species remained stable overall. Consequently, it is evaluated as Secure.

Country	Breeding pop. size (pairs)	Year(s)	Trend	Mag. %	References
Albania	5,000 – 10,000	02	(0)	(0–19)
