Criteria —

Cyanopica cyanus is resident in Iberia, with Europe accounting for less than a quarter of its disjunct global range (the rest—well separated—occurring in eastern Asia). Its European breeding population is large (>260,000 pairs), and was stable between 1970–1990. Although the trend of the key Spanish population during 1990–2000 was unknown, the population in Portugal was stable, and there was no evidence to suggest that the species's status deteriorated overall. Consequently, it is provisionally evaluated as Secure.

Country	Breeding pop. size (pairs)	Year(s)	Trend	Mag.%	References
Portugal	(20,000 – 200,000)	02	(0)	(0–19)	
Spain	(240,000 – 260,000)	92	?	–	13,12,10
Total (approx.)	260,000 – 460,000	Overall trend		Unknown	
Breeding range	>250,000 km²	Gen. length.		<3.3 %	Global pop. 5–24
