Cinclus cinclus is a widespread but patchily distributed resident in the more mountainous areas of Europe, which accounts for less than half of its global range. Its European breeding population is large (>170,000 pairs), and was stable between 1970–1990. Although there were declines in a few countries during 1990–2000, populations were stable across the majority of its European range—including the key one in Romania—and the species remained stable overall. Consequently, it is evaluated as Secure.
