Criteria —

Dendrocopos leucotos is a widespread resident in eastern Europe, and occurs more patchily elsewhere, with Europe accounting for less than half of its global range. Its European breeding population is large (>180,000 pairs), and was stable between 1970–1990. Although there were declines in a few countries during 1990–2000, populations were stable or increased across most of its European range, and the species probably remained stable overall. Consequently, it is provisionally evaluated as Secure.

| Country | Breeding pop. size (pairs) | Year(s) | Trend | Mag. % | References |
