Criteria —

Ficedula parva is a widespread summer visitor to north-eastern and central Europe, which accounts for less than half of its global breeding range. Its European breeding population is very large (>3,200,000 pairs), and was stable between 1970–1990. Although there were declines in a few countries during 1990–2000, populations were stable across the majority of its European range—including in the Russian stronghold—and the species probably remained stable overall. Consequently, it is provisionally evaluated as Secure.

Country	Breeding pop. size (pairs)	Year(s)	Trend	Mag.%	References
Albania	(0 – 50)	02	?	–
