Erithacus rubecula
EUROPEAN ROBIN

Non-SPEC (1994: 4) Status Secure
criteria —
European IUCN Red List Category —
Global IUCN Red List Category —
criteria —

Erithacus rubecula is a widespread breeder across most of Europe, which constitutes >50% of its global breeding range. Its European breeding population is extremely large (>43,000,000 pairs), and was stable between 1970–1990. Although the species declined in Sweden during 1990–2000, these losses were compensated for by increases in the sizeable populations in France and the United Kingdom, and the species underwent a small increase overall. Consequently, it is evaluated as Secure.

Luscinia luscinia
THRUSH NIGHTINGALE

Non-SPEC (1994: 4) Status Secure
criteria —
European IUCN Red List Category —
Global IUCN Red List Category —
criteria —

Luscinia luscinia is a widespread summer visitor to north-eastern Europe, which constitutes >50% of its global breeding range. Its European breeding population is very large (>3,700,000 pairs), and was stable between 1970–1990. Although there were declines in some marginal populations during 1990–2000, key populations in the core of the breeding range—notably Russia—were stable, and the species remained stable overall. Consequently, it is evaluated as Secure.
