Criteria —

Luscinia calliope has a predominantly Asian breeding distribution, which just extends west of the Urals into European Russia. Its European breeding population is very small (as few as 800 pairs), but was stable between 1970–1990. No trend data were available for 1990–2000, but there was no evidence to suggest that the species declined. Although the size of the European population could render it susceptible to the risks affecting small populations, it is marginal to a much larger non-European population. Consequently, the species is provisionally evaluated as Secure.

Country	Breeding pop. size (pairs)	Year(s)	Trend	Mag. %	References
Russia	(800 – 1,000)	90–00	?	–	51,52
Total (approx.)	800 – 1,000	Overall trend Unknown			
Breeding range	>50,000 km ²	Gen. length <3.3 %			Global pop. <5
