

Erythropygia galactotes

RUFIOUS-TAILED SCRUB-ROBIN

SPEC 3 (1994: —) **Status** (Vulnerable)

Criteria See IUCN below

European IUCN Red List Category VU

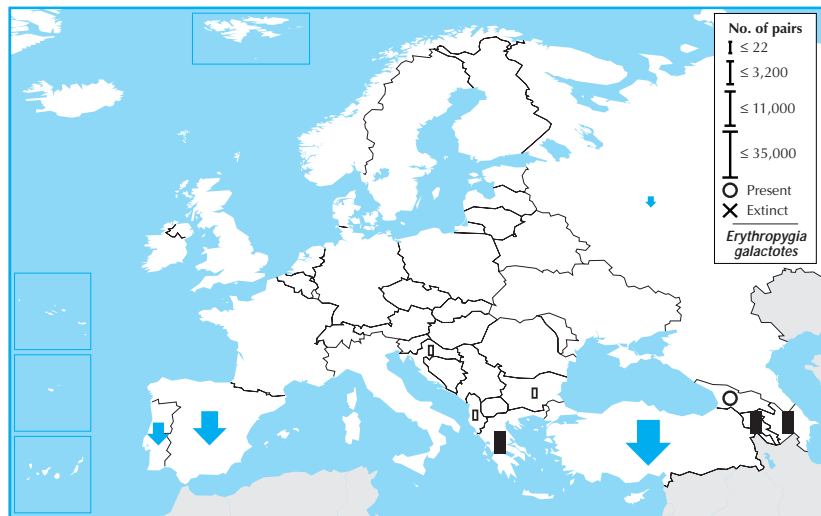

Criteria A2b

Global IUCN Red List Category —

Criteria —

Erythropygia galactotes is a widespread but patchily distributed summer visitor to southernmost Europe, which accounts for less than half of its global breeding range. Its European breeding population is relatively small (<96,000 pairs), but was stable between 1970–1990. Although the species was stable in a few countries during 1990–2000, key populations in Turkey and Spain suffered declines, and the species underwent a large decline (>30%) overall. Consequently, this previously Secure species is now provisionally evaluated as Vulnerable.

Country	Breeding pop. size (pairs)	Year(s)	Trend	Mag. %	References
Albania	(0 – 50)	02	?	–	
Armenia	830 – 3,300	98–02	0	0–19	
Azerbaijan	(1,000 – 10,000)	96–00	(0)	(0–19)
