Cettia cetti is a widespread breeder across much of southern Europe, which accounts for less than half of its global breeding range. Its European breeding population is large (>600,000 pairs), and increased between 1970–1990. Although the species declined slightly in Greece during 1990–2000, key populations in Italy and Turkey were stable, and trends were increasing or stable across the rest of its European range. The species hence underwent a small increase overall, and consequently is evaluated as Secure.

Country	Breeding pop. size (pairs)	Year(s)	Trend	Mag.%	References
Albania	5,000 – 20,000	02	(0)	(0–19)
