## Acrocephalus palustris MARSH WARBLER

Non-SPEC<sup>E</sup> (1994: 4) Status (Secure) Criteria — European IUCN Red List Category — Criteria —

Global IUCN Red List Category —
Criteria —

Acrocephalus palustris is a widespread summer visitor to central and eastern Europe, which constitutes >75% of its global breeding range. Its European breeding population is very large (>3,200,000 pairs), and was stable between 1970–1990. Although there were declines in Germany during 1990–2000, other populations increased or remained stable—including the key populations in Poland, Romania and Russia—and the species probably remained stable overall. Consequently, it is provisionally evaluated as Secure.
