Global IUCN Red List Category —

Criteria —

Hippolais icterina is a widespread summer visitor to much of Europe, except for the far west and south, with the region constituting >75% of its global breeding range. Its European breeding population is very large (>3,500,000 pairs), and was stable between 1970–1990. Although there were declines in some western populations—most notably in Germany—during 1990–2000, key populations to the east, including the stronghold in Russia, were stable, and the species probably remained stable overall. Consequently, it is provisionally evaluated as Secure.
