*Sylvia borin* is a widespread summer visitor to much of Europe, which constitutes >75% of its global breeding range. Its European breeding population is extremely large (>17,000,000 pairs), and was stable between 1970–1990. Although there were declines in France during 1990–2000, other key populations in Sweden, Finland, Germany, Romania and Russia were stable, and the species probably remained stable overall. Consequently, it is provisionally evaluated as Secure.
