

Loxia scotica SCOTTISH CROSSBILL

SPEC 1 (1994: 1) **Status** Data Deficient
Criteria —
European IUCN Red List Category DD
Criteria —
Global IUCN Red List Category DD
Criteria —

Loxia scotica is endemic to Europe, where it is resident in northern Scotland (United Kingdom). Its breeding population is probably very small (as few as 300 pairs), but trend data were not available for either 1970–1990 or 1990–2000. Consequently, this poorly known species is categorised as Data Deficient.

Country	Breeding pop. size (pairs)	Year(s)	Trend	Mag. %	References
UK	300 – 1,250	88	?	–	
Total (approx.)	300 – 1,250	Overall trend Unknown			
Breeding range	>20,000 km ²	Gen. length. <3.3 %			Global pop. 100

2000 population	100			
1990 population	100
