

# Important Bird Areas and potential Ramsar Sites in Europe

## ■ What is BirdLife International?

BirdLife International is a Partnership of non-governmental conservation organisations with a special focus on birds. The BirdLife Partnership works together on shared priorities, policies and programmes of conservation action, exchanging skills, achievements and information, and so growing in ability, authority and influence.

Each Partner represents a unique geographic area or territory (most often a country). In addition to Partners, BirdLife has Representatives and a flexible system of Working Groups (including some bird Specialist Groups shared with Wetlands International and/or the Species Survival Commission (SSC) of the World Conservation Union (IUCN)), each with specific roles and responsibilities.

## ■ What is the purpose of BirdLife International? – Mission Statement

The BirdLife International Partnership strives to conserve birds, their habitats and global biodiversity, working with people towards sustainability in the use of natural resources.

## ■ Where is BirdLife International heading? – Vision Statement

Birds are beautiful, inspirational and international. Birds are excellent flagships and vital environmental indicators. By focusing on birds, and the sites and habitats on which they depend, the BirdLife International Partnership is working to improve the quality of life for birds, for other wildlife (biodiversity) and for people.

## ■ Aims

BirdLife's long-term aims are to:

- prevent the extinction of any bird species
- maintain and where possible improve the conservation status of all bird species
- conserve and where appropriate improve and enlarge sites and habitats important for birds
- help, through birds, to conserve biodiversity and to improve the quality of people's lives
- integrate bird conservation into sustaining people's livelihoods.

## ■ Guiding principles

BirdLife International promotes sustainable living as a means of conserving birds, and all other life forms. BirdLife Programmes are built through a participatory process of:

- linking Partners to plan policy, programmes and actions and to agree chosen priorities
- using the expertise and resources of Partners in all activities as fully as possible
- dividing programme tasks and responsibilities amongst the Partnership according to their wishes, expertise and capabilities
- sharing skills, experience and information within the Partnership so as to develop the capacity of individual Partners
- providing open access to data on birds and biodiversity to enable better informed decision-making
- democratic governance by the Partners
- working through local communities, organisations and individuals
- integrating bird and biodiversity conservation with social and economic development.

BirdLife International works with all like-minded organisations, national and local governments, decision-makers, landowners and managers, in pursuing bird and biodiversity conservation. The global work of the BirdLife Partnership is funded entirely by voluntary donations.

To find out more about how you could support this work please contact BirdLife International, European Division Office, Droevedaalsesteeg 3a, PO Box 127, NL-6700 AC Wageningen, The Netherlands.

## Preface

One of the three main pillars of the Ramsar Convention on Wetlands is that "each Contracting Party shall designate suitable wetlands within its territory for inclusion in a List of Wetlands of International Importance", expressed in Article 2. The other two pillars are the national commitment to ensure wise use of all wetlands in the country and to cooperate at international level, notably when wetlands extend over the territories of more than one country, where a water system is shared by several states, and in respect of shared migratory waterbird populations.

Through its evolution over the last thirty years, the Convention on Wetlands has developed criteria for the designation of Wetlands of International Importance, often known as "Ramsar Sites". Given the initial focus on "Wetlands of International Importance especially as Waterfowl Habitat", criteria based on waterbirds were most rapidly established and specific guidelines prepared to assist Contracting Parties in taking a systematic approach to identifying their priority sites for designation.

Based on the first inventory of "Important Bird Areas in Europe", published in 1989 by ICBP and IWRB, these two International Organisation Partners of the Convention on Wetlands were able to provide to the European Contracting Parties, meeting for their 4th Conference (COP4) in Montreux, Switzerland, a first list of sites that qualified for Ramsar Site designation under the two waterbird criteria, relating to wetlands regularly supporting more than 20,000 waterbirds, and regularly supporting more than 1% of a population, subspecies or species of waterbird. I am delighted that BirdLife International has now produced a new list of key sites for waterbirds in Europe, based on the enormous work and the many years of effort by the Europe-wide BirdLife partnership to produce an updated, comprehensive inventory of "Important Bird Areas in Europe, priority sites for conservation", which was published in 2000.

During the 7th meeting of their Conference (COP7) in San José, Costa Rica, the Contracting Parties adopted a vision for the List of Wetlands of International Importance: "to develop and maintain an international network of wetlands which are important for the conservation of global biological diversity and for sustaining human life through the ecological and hydrological functions they perform." To realise this vision for the Ramsar List, Parties agreed on three main objectives: 1) to establish national networks of Ramsar Sites which fully represent the diversity of wetlands and their key ecological and hydrological functions; 2) to contribute to maintaining global biological diversity through the designation and management of appropriate wetland sites; and 3) to foster cooperation among Contracting Parties, the Convention's International Organisation Partners, and local stakeholders in the selection, designation, and management of Ramsar Sites.

This new report, "Important Bird Areas and potential Ramsar Sites in Europe", is a most valuable contribution from one of our International Organisation Partners, BirdLife International, towards assisting Ramsar's Contracting Parties throughout Europe in achieving this vision for the List. The report provides state-of-the-art information on the importance of over 2000 wetland sites across all European countries for wetland-dependent bird species and populations, identifying from the data gathered during the European IBA programme the wetlands that appear to qualify for Ramsar site designation under the criteria based on bird species and ecological communities (criteria 2 and 4), and those specifically on waterbirds (criteria 5 and 6). I am sure that the report will provide an invaluable reference tool for the practical steps to be taken by the Contracting Parties for applying the vision for the Ramsar List, as elaborated in Ramsar Handbook 7 "Strategic Framework and guidelines for the future development of the List of Wetlands of International Importance".

The report also provides information on the occurrence in these key sites of globally threatened wetland-dependent birds, at wetlands across Europe. It has been widely recognised that such sites are as yet under-represented in the Ramsar List. The report thus also provides a valuable source for Parties in applying designation Criterion 2 concerning wetlands supporting vulnerable, endangered, or critically endangered species or threatened ecological communities, for which further guidance for Contracting Parties is being developed by BirdLife International and Wetlands International.

I congratulate BirdLife International on their efforts in producing this most valuable report, and I strongly urge all European Contracting Parties to use the report as an inspiration in their efforts to achieve the short-term global target of 2000 Ramsar Sites by COP9 in the year 2005 (Resolution VII.11). I commend it to all involved with wetland conservation and the Ramsar Convention in Europe – and as a model for developing such reports for other regions of the world.

## Introduction

### Important Bird Areas in Europe

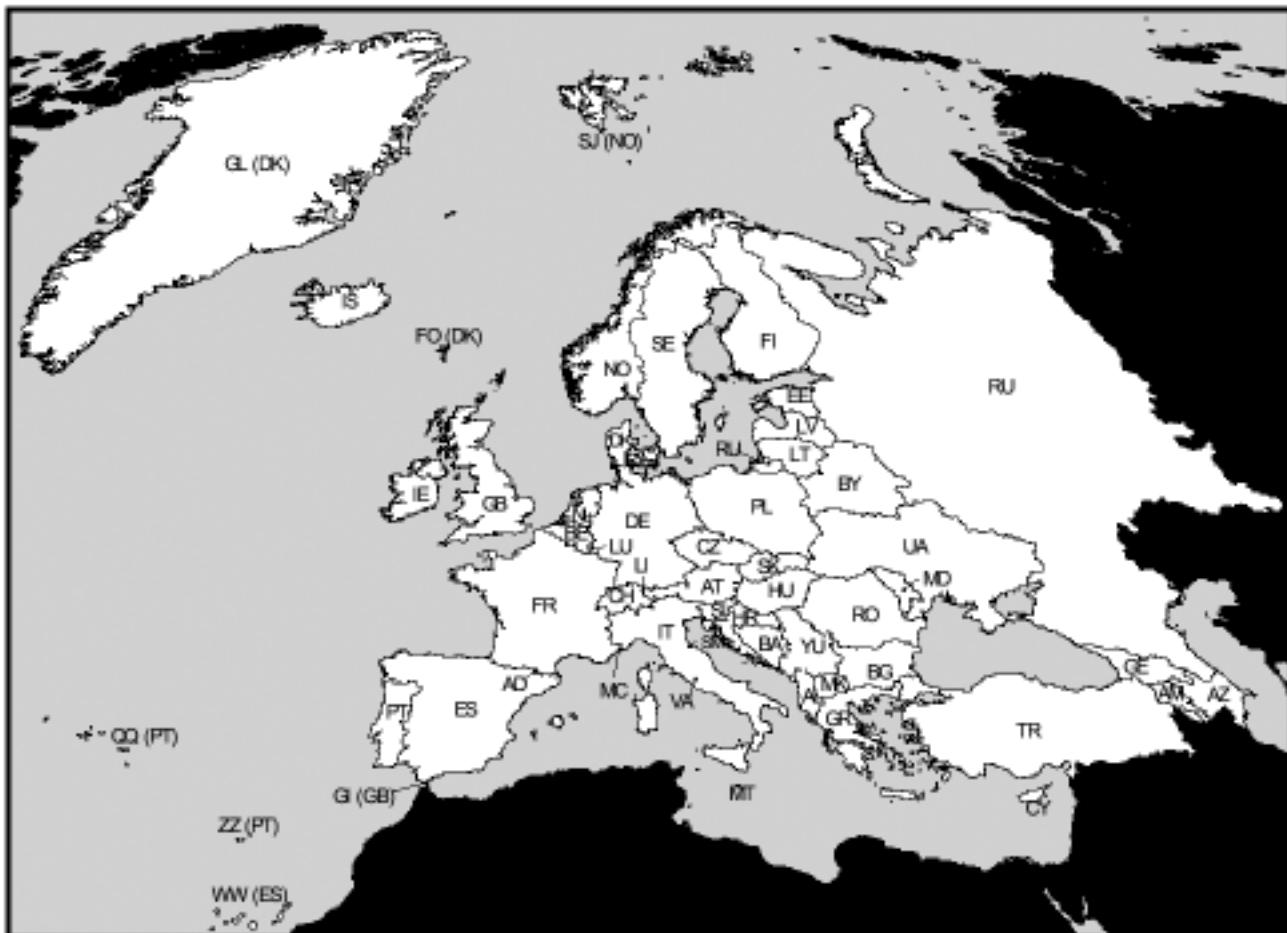

The geographic extent of Europe as considered in this report is shown in Figure 1 and encompasses Greenland, western Russia (all administrative regions lying mainly west of the Ural mountains and Ural river), Armenia, Azerbaijan, Georgia, Cyprus and all of Turkey.

The Important Bird Areas (IBA) Programme<sup>1</sup> of BirdLife International<sup>2</sup> is a worldwide initiative aimed at identifying and protecting a network of critical sites for the conservation of the world's birds. The first IBA inventory to cover the whole of Europe was published in 1989 (Grimmett and Jones 1989). Facilitated since 1990 by a coordinator at the BirdLife International Secretariat and, increasingly, by national IBA Coordinators in individual countries, the actions of many individuals

and organisations have coalesced into a large-scale European IBA Programme. This has resulted in the production of twenty national IBA inventories and recently a new pan-European inventory (Heath & Evans 2000)<sup>3</sup>. Building on these inventories, the European IBA Programme for the last decade has addressed site-oriented research and action, encompassing habitat management, monitoring, education, advocacy, and national and international legal protection.

A total of 4,000 IBAs have been identified in Europe currently. The conservation status of each has been measured using seven core indicators, which has generated a large amount of data (Table 1, next page). Most of these data are available online at <http://www.birdlife.org.uk/sites>.

2 In Europe, BirdLife International includes 40 organisations that together have over 2 million members and over 2000 paid staff.

3 Much of the information used for the compilation of this report is drawn from Heath & Evans (2000).

**Table 1.** Core indicators used for measuring the conservation status of IBAs in Europe and data availability

Indicator type	Indicator	Description	No. of records in WBDB*
State	Site boundary and area	Paper or digital map of each IBA boundary and a measure of its area (hectares)	4000
	Habitat	Inventory of all primary habitats (10 types) covering >5% of each IBA and the total area of each type within each IBA	12,000
	Key bird populations	Population size and trend (during past 10 years) of each bird species for which each IBA was selected (average of 4 species per IBA)	17,000
	Land-use	Inventory of all land-uses (12 types) covering >5% of each IBA and the % cover of each land-use within each IBA	12,000
Pressure	Threats	Inventory of key threats (12 types) and their impact (using standard IBA methodology) within each IBA	14,000
Response	Protection status	Inventory of over-lapping protected areas and the extent of over-lap between each IBA and the protected area	16,000
	Management plan	Whether each IBA is (partly or wholly) covered by an existing management plan	650

\* WBDB - BirdLife International World Bird Database (a purpose-built database used for the management, analysis and reporting of data held by BirdLife International).

### Identifying potential Ramsar Sites

The method used in this report for selecting potential Ramsar Sites has been applied, not to all wetlands in Europe, but to those sites identified by BirdLife International as Important Bird Areas (Heath and Evans 2000). Twenty criteria have been developed for the selection of IBAs in Europe. These allow the identification of IBAs based on a site's international importance for:

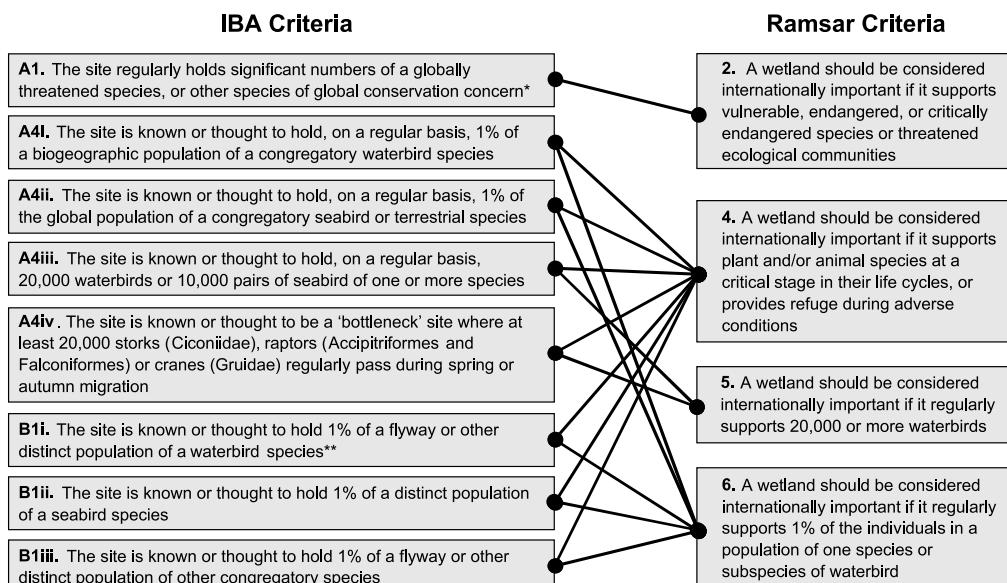

- Threatened bird species
- Congregatory bird species
- Assemblages of restricted-range bird species
- Assemblages of biome-restricted bird species

A number of IBA criteria are related directly to Ramsar criteria (Figure 2). Hence, potential<sup>4</sup> Ramsar Sites of international importance for wetland-dependent birds can be identified with relative ease from IBA inventories. For the present report, this was done step-wise:

1. A species list was compiled of all wetland birds whose natural range includes areas of Europe (Appendix 1).
2. Using the BirdLife International World Bird Database, data on 4,000 IBAs and 17,000 key bird populations at these sites were analysed to compile a preliminary list of all IBAs important for

wetland birds under the criteria shown in Figure 2 (excluding consideration of the Slender-billed Curlew *Numenius tenuirostris* since no sites are known where it occurs regularly in Europe).

3. All IBAs not containing wetland habitat were excluded from the site list (e.g. dry grassland IBAs important for Corncrake *Crex crex*).
4. Ramsar designation coverage by September 2001 of wetland habitat within each IBA included within the site list was categorised as:
  - Ramsar designation complete - all wetland habitat important for key wetland birds (i.e. birds that trigger the IBA and Ramsar criteria listed in Figure 2) within the IBA is included currently within one or more Ramsar Sites.
  - Ramsar designation partial - some wetland habitat important for key wetland birds within the IBA is included currently within one or more Ramsar Sites, but expansion of current or designation of new Ramsar Sites is needed to cover excluded areas within the IBA.
  - Ramsar designation lacking - no wetland habitat important for key wetland birds within the IBA is included within any Ramsar Site.

**Figure 2.** Direct links between IBA and Ramsar criteria

\* See Table 2 for definitions of "significant numbers" and "species of global conservation concern".

\*\* In some (very few) cases the 1% threshold used for IBA criterion B1i is lower than that used for Ramsar criterion 6.

4 "Potential", "candidate" and "qualifying" are all terms in common use for sites that are considered to merit Ramsar listing. For the purposes of this report they are treated as synonymous.

**Table 2.** Wetland birds of global conservation concern in Europe and population thresholds for identifying IBAs

Species	Global threat status*	Threshold (individuals)**
Balearic Shearwater <i>Puffinus mauritanicus</i>	NT	30
Pygmy Cormorant <i>Phalacrocorax pygmeus</i>	NT	30
Dalmatian Pelican <i>Pelecanus crispus</i>	CD	30
Lesser White-fronted Goose <i>Anser erythropus</i>	VU	15
Red-breasted Goose <i>Branta ruficollis</i>	VU	60
Marbled Duck <i>Marmaronetta angustirostris</i>	VU	15
Ferruginous Duck <i>Aythya nyroca</i>	NT	60
White-headed Duck <i>Oxyura leucocephala</i>	EN	15
White-tailed Eagle <i>Haliaeetus albicilla</i>	NT	15
Greater Spotted Eagle <i>Aquila clanga</i>	VU	6
Corncrake <i>Crex crex</i>	VU	60
Black-winged Pratincole <i>Glareola nordmanni</i>	DD	30
Sociable Plover <i>Chettusia gregaria</i>	VU	30
Great Snipe <i>Gallinago media</i>	NT	60
Slender-billed Curlew <i>Numenius tenuirostris</i>	CR	1
Audouin's Gull <i>Larus audouinii</i>	NT	60
Aquatic Warbler <i>Acrocephalus paludicola</i>	VU	30

\* Global threat status follows BirdLife International (2000): CR Critically Endangered; EN Endangered; VU Vulnerable; CD Conservation Dependent; DD Data Deficient; NT Near-Threatened.

\*\* To convert to pairs, divide by factor 3. See Heath & Evans (2000) for explanation of threshold levels.

---

## Overview of results

### Distribution of selected sites

Data on IBAs have been collected from every territory in Europe, but following the site selection criteria used in this report (see Introduction) no IBAs qualifying as potential Ramsar Sites have been identified in Andorra, Gibraltar, Holy See (Vatican City), Liechtenstein, Monaco or San Marino. In the remainder of Europe a total of 2,083 IBAs were identified that contain areas that qualify as Ramsar Sites (Figure 3). These are spread across the entire continent, from Kilen IBA (81°N in Greenland) 5,500 km south to Western coast of El Hierro IBA (27°N in the Canary Islands), and from Fyllas bank off Nuuk IBA (64°W in Greenland) 7,750 km east to Lake Ayke IBA (51°E in Russia). Sites are sparser in the north, with the most noticeable concentration in northern Germany, Denmark and The Netherlands resulting from the tremendous importance of wetlands in this region for wintering and passage waterbirds that breed in more northern latitudes, coupled with recent intense IBA identification work in this area.

Figure 4 shows IBAs that contain areas that qualify as Ramsar Sites under Criterion 2 (threatened species sites). These are spread across most of the continent, though are relatively scarce in the north and west (where threatened waterbirds are also relatively scarce). Figure 5 shows IBAs that contain areas that qualify as Ramsar Sites under Criterion 5 (sites with >20,000 waterbirds). The most striking concentration of sites occurs in north Germany, Denmark, The Netherlands, UK, Ireland and the Atlantic coast of France, which again illustrates the importance of wetlands in this region as wintering sites for northerly breeding waterbirds. In addition, the figure shows large concentrations of waterbirds around the north and west Black Sea coast, which is also a very important wintering region for northern breeding waterbirds. Other noticeable concentrations occur in Iceland, Faroe Islands, north UK, north Norway and Svalbard, which results primarily from the great importance of these areas for breeding seabirds.

IBAs that contain areas that qualify as Ramsar Sites under Criterion 4 (critical or refuge sites) and Criterion 6 (1% threshold sites) have a distribution very similar to that of all sites illustrated in Figure 3, since most sites selected qualify under at least these two criteria.

### Ramsar designation progress

Table 3 shows progress by country with the designation of selected IBAs. Of the 2,083 IBAs selected, 502 (24%) have been designated to some extent, with high numbers of such sites in the UK, The Netherlands, Denmark, Germany and Spain. However, within 200 of these sites there is a need for the extension of Ramsar boundaries to include other important wetland habitat. A total of 1,581 (76%) of the selected IBAs have no Ramsar designation as yet, with high numbers of such sites in Russia, Germany, Turkey and Ukraine.

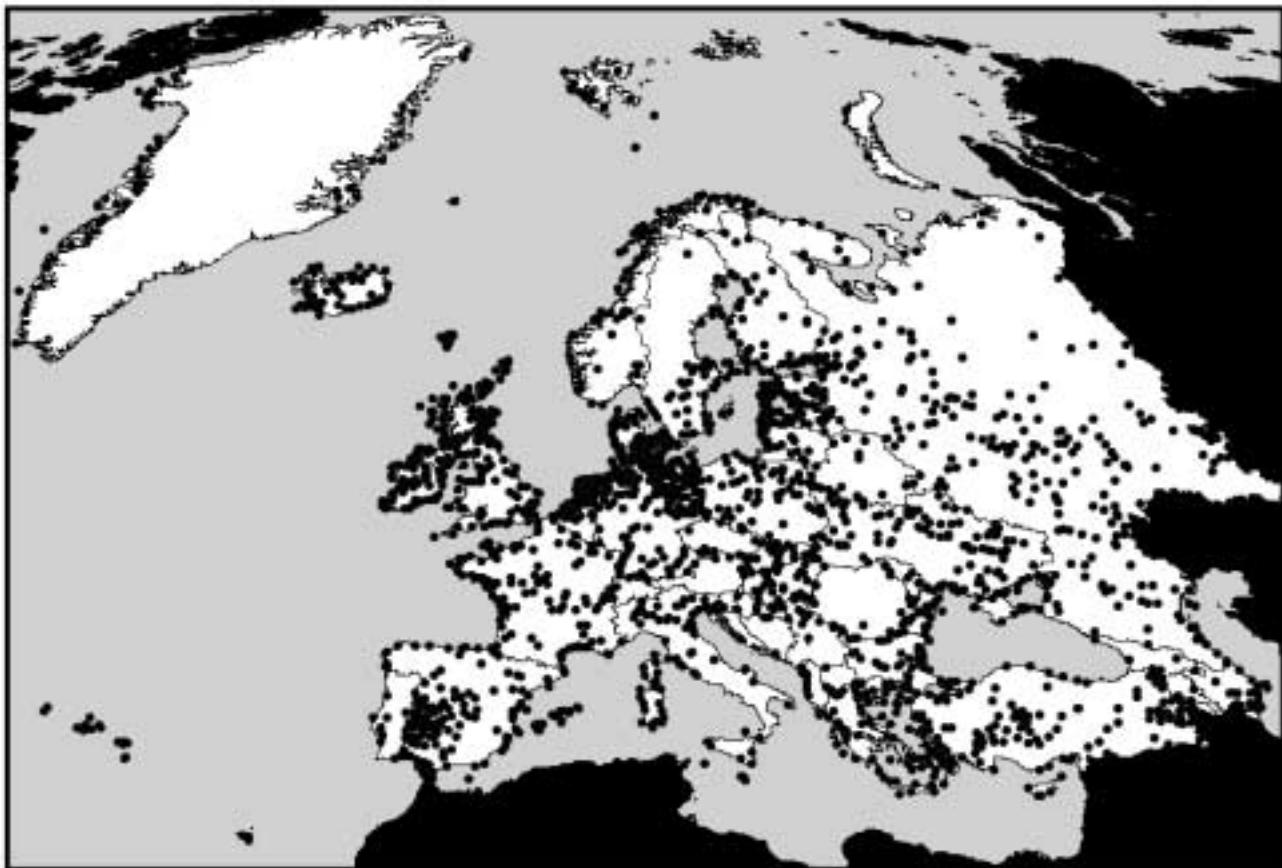

Figure 6 shows the distribution of selected IBAs that have at least partial Ramsar coverage. These are clustered clearly in north Germany, Denmark, The Netherlands, the UK and Ireland, which reflects closely the aggregation of sites of particular importance for large concentrations of wintering waterbirds (Figure 5). However, it is somewhat opposite to the distribution of sites important for threatened species, which show a central and eastern continental skew (Figure 4).

## What should be done next?

### Confirming official lists of candidate sites

This document gives an up to date list of sites that are shown by IBA data to merit Ramsar designation. It is offered to Contracting Party governments as a technical contribution from BirdLife International in its capacity as one of the Convention's International Organisation Partners. Meetings of the Parties at regional or global level should endorse these findings in appropriate ways, but decisions as to what shall be official candidate sites, and decisions as to designation, remain the responsibility of Parties.

In many instances the data in this document arise from collaborative work between NGOs (BirdLife Partners) and governments. In addition, in the European Union, IBAs have gained official acceptance in the eyes of the Court of Justice.

It is an important and urgent "next step" for the lists of deserving Ramsar Site candidates presented in this document to be officially recognized as such by Contracting Party governments. In some cases where there has been good discussion of the matter already, this may now be no more than a rapid formality. In others, where more consideration is required, BirdLife urges that attention be given to it immediately.

The Conference of Parties called for such action in 1996, in Resolution VI.12, which *inter alia* "urges each Contracting Party to recognise officially its identified sites meeting the criteria approved by the Conference of the Contracting Parties".

### Defining Ramsar Site boundaries

It is beyond the scope of this document to indicate the precise boundary of each site, but clearly, before designation, definition of

such boundaries will be required as a "next step". In many cases an appropriate boundary will already be suggested by the boundary of the IBA. Contracting Party governments are therefore urged to take the earliest opportunity to discuss this with BirdLife Partners/Secretariat (see Contact points and acknowledgements).

In some cases, in addition to an IBA boundary which encompasses an area of significance for birds, other contiguous areas beyond it which are wetland habitats meeting non-bird Ramsar criteria might also need to be included in any eventual Ramsar site. In some other cases, an IBA that contains wetland habitats of sufficient importance to be designated as a Ramsar site may also contain other non-wetland areas, which may not need to be included in the Ramsar designation. However the simple fact of an area being a non-wetland component need not be a reason for its exclusion, if it plays an integral part in the functioning of the ecosystem.

Guidance and standards for boundary definition of Ramsar Sites have been adopted by the Conference of Parties, in the annex to Resolution VII.II (1999) on the Strategic framework and guidelines for the future development of the List of Wetlands of International Importance (see Box 1). In addition, Recommendation 5.3 (1993) has referred to the importance of a whole catchment approach, to buffer zones, and to ecological corridors.

In Resolution VI.16 (1996) the Parties decided that when sites are designated, their boundaries must be "precisely described and also delimited on a map". Standards of precision for this have not yet been defined under the Convention, but this is becoming an increasingly important issue, and Parties are urged to use the best practicable degree of precision, especially in the interests of legal certainty.

#### Box 1. Extract from Guidelines for adopting a systematic approach to identifying priority wetlands for designation under the Ramsar Convention (annexed to Resolution VII.II)

46. Boundary definition of sites. When designating sites, Contracting Parties are encouraged to take a management-oriented approach to determining boundaries, recognizing that these should allow management of the site to be undertaken at the appropriate scale for maintaining the ecological character of the wetland. Article 2.1 of the Convention indicates that Ramsar Sites "may incorporate riparian and coastal zones adjacent to the wetlands, and islands or bodies of marine water deeper than six metres at low tide lying within the wetlands". For very small and therefore potentially vulnerable sites, Contracting Parties are encouraged to include buffer zones around the wetland. These may also be a useful management tool for subterranean system wetlands as well as larger sites.

47. In determining the boundaries of sites identified as habitat for animal species, these should be established so as to provide adequately for all the ecological and conservation requirements of those populations. In particular, large animals, species at the top of food-chains, those with large home-ranges, or with feeding and resting areas that are widely separated, will generally require substantial areas to support viable populations. If it is not possible to designate a site extending to the entire range used or accommodating viable (self-sustaining) populations, then additional measures relating to both the species and its habitat should be adopted in the surrounding areas (or the buffer zone). These measures will complement the protection of the core habitat within the Ramsar site.

48. While some sites considered for designation will be identified at landscape scale, containing substantial elements of whole wetland ecosystems, others may be smaller. In selecting and delimiting such more restricted wetlands the following guidance may assist in determining their extent:

- i. as far as possible, sites should include complexes or mosaics of vegetation communities, not just single communities of importance. Note that wetlands with naturally nutrient poor (oligotrophic) conditions generally exhibit low diversity of species and habitats. In these wetlands, high diversity may be associated with low conservation quality (indicated by markedly altered conditions). Thus, diversity must always be considered within the context of the norms of the wetland type;
- ii. zonations of communities should be included as completely as possible in the site. Important are communities showing natural gradients (transitions), for instance from wet to dry, from salt to brackish, from brackish to fresh, from oligotrophic to eutrophic, from rivers to their associated banks, shingle bars and sediment systems, etc.;
- iii. natural succession of vegetation communities often proceeds rapidly in wetlands. To the greatest extent possible and where these exist, all phases of succession (for example, from open shallow water, to communities of emergent vegetation, to reedswamp, to marshland or peatland, to wet forest) should be included in designated sites. Where dynamic changes are occurring, it is important that the site is large enough so that pioneer stages can continue to develop within the Ramsar site;
- iv. continuity of a wetland with a terrestrial habitat of high conservation value will enhance its own conservation value.

49. The smaller the site, the more vulnerable it is likely to be outside influences. In determining boundaries of Ramsar Sites, particular attention should be given to ensuring that wherever possible the limits of the sites serve to protect them from potentially damaging activities, especially those likely to cause hydrological disturbance. Ideally, boundaries should include those areas of land necessary to provide and maintain the hydrological functions needed to conserve the international importance and integrity of the site. Alternatively, it is important that planning processes are operating to ensure that potential negative impacts arising from land-use practices on adjoining land or within the drainage basin are suitably regulated and monitored to provide confidence that the ecological character of the Ramsar site will not be compromised.

## **Consulting and finalising site details**

In most cases Parties will wish to conduct consultations on proposals for new Ramsar Site designations with stakeholders such as local administrations and perhaps affected communities. This can be important in building support for the implementation of the Convention, and can produce information that might be important in refining site details and boundaries. An appropriate balance will need to be struck between exhaustive discussion and prompt protection.

In the light of consultations, site details can be refined and finalised prior to the formal act of designation. An essential step at this stage is the completion of a standard Ramsar Information Sheet (RIS) for submission to the Ramsar Bureau. The sheet can be accessed at [www.ramsar.org/key\\_ris.htm](http://www.ramsar.org/key_ris.htm), and guidance on its completion can be found at [www.ramsar.org/key\\_ris\\_guide.htm](http://www.ramsar.org/key_ris_guide.htm). COP Recommendation 4.7 (1993) and Resolution VI.13 (1996) encourage the use of the RIS.

## **Protecting sites prior to designation**

BirdLife's two strongest recommendations arising from this candidate sites work are (a) that the sites identified should be designated as Ramsar Sites as soon as possible, and (b) while waiting for the designation process to be completed, sites should receive the degree of protection which Ramsar designation would afford them.

Sites are sometimes damaged through lack of knowledge about their value: however once their value is known, it would be unfortunate not to apply the desired level of protection simply because a formal step of designation had not yet been completed.

Ideally, this should apply to all the sites in this document from the time of its publication. At the least, however, BirdLife would advocate that it be applied as a matter of policy upon adoption of official lists of candidate sites at government level, as described above in "Confirming official lists of candidate sites". This practice exists in some places already, where decision-making authorities treat recognised candidate sites as though they were already designated. To do so effectively, requires that this approach be advertised as an official policy, endorsed at the same level of government that designates sites.

## **Approaches to designation**

The act of designation takes different forms in different countries, and its manner is not prescribed under the Convention. Typically it may be an administrative notification to relevant authorities, land-

owners and (by public announcement) local communities, made by the responsible Ministry. In some cases it may be a form of Presidential decree, and in some cases a specific legal instrument applying to the site(s) in question. Parties are free to decide the approach taken; but some points of general good practice are worth mentioning here.

As with the notification of designations to the Ramsar Bureau, a map showing the site boundary should be made available. Information on the reasons why the site is designated, and the particular functions and values which need to be taken into account in planning, management and decision-making, should also be made available. The legal and policy implications of designation (based on the provisions of the Convention of course, but elaborated as appropriate for the jurisdiction concerned) should be made clear; as should the allocation of relevant responsibilities, and sources of further information. Wide publicity is desirable, to raise awareness of the significance of the site, and of the Convention generally.

## **After designation**

The purpose of this document is to contribute towards the adequate representation of important areas for waterbirds in the List of Wetlands of International Importance in Europe. Acting on the steps above should achieve this.

These steps, however, constitute merely the first stage towards the concrete end-objective of fuller implementation of the listed sites aspects of the Ramsar Convention, and better conservation and wise use of wetlands generally. A wealth of other material and advice is available under the Convention, and from BirdLife International and others, on the various dimensions of the treatment of sites once listed. All users of this document are therefore encouraged to continue dialogue with the authors and the Ramsar Bureau on issues such as planning, decision-making, management, monitoring and awareness-raising.

With the assistance of the systematic information base presented here, the prospects for ultimately stronger, more complete and more durable success in the conservation and wise use of wetlands of importance for birds in Europe should be better than ever before. The challenge to deliver this rests now on all governments and NGOs who are in a position to put this document to use. BirdLife urges the highest levels of commitment to this among all concerned, and stands ready to provide whatever further assistance may be required.

## Country chapters

The following sections provide a country-by-country assessment of IBAs and potential Ramsar Sites in Europe. For each IBA selected details are provided for international name, location, area, Ramsar qualifying criteria and designation progress. An analysis of the occurrence of wetland-dependent threatened species at each IBA

is also provided together with a brief assessment of the likely development of the site network.

Full details of each site, including bird populations, can be found at <http://www.birdlife.org/sites>.

See "Identifying potential Ramsar Sites" for description of site and species selection procedure and method for evaluating adequacy of Ramsar coverage used in this report. See also full details of each site, including bird populations, at <http://www.birdlife.org.uk/sites>

#### Location of Important Bird Areas that contain areas which qualify as Ramsar Sites in Albania

● Ramsar designation of IBA complete; ○ Ramsar designation of IBA partial; ■ Ramsar designation of IBA lacking

#### Designation progress:

Areas within ten IBAs qualify currently as Ramsar Sites. Designation coverage is complete within one of these, while nine have no Ramsar designation as yet.

#### Summary of Important Bird Areas that contain areas which qualify as Ramsar Sites in Albania

IBA Code	IBA Name	IBA Area (ha)	Ramsar Name	Ramsar Area (ha)	Ramsar Criteria			
					2	4	5	6
<b>Ramsar designation of IBA complete (n=1)</b>								
AL006	Karavasta Lagoon	5450	Karavasta Lagoon	20000	+	+	+	+
<b>Ramsar designation of IBA lacking (n=9)</b>								
AL001	Lake Shkodra (Lake Scadar)	14000		0	+	+	+	+
AL002	Lake Ohrid	9700		0	+	+	+	+
AL003	Lake Megali Prespa	10000		0	+	+		+
AL004	Lake Mikri Prespa	800		0	+

AL013		+	+		2
<b>Grand Total</b>	<b>2</b>	<b>2</b>	<b>7</b>	<b>1</b>	<b>12</b>

**Site network development:**

About 70% of potential IBAs have been identified in Albania. Few other wetland IBAs are likely to be identified based on the criteria considered in this report.

See "Identifying potential Ramsar Sites" for description of site and species selection procedure and method for evaluating adequacy of Ramsar coverage used in this report. See also full details of each site, including bird populations, at <http://www.birdlife.org.uk/sites>

#### Location of Important Bird Areas that contain areas which qualify as Ramsar Sites in Armenia

● Ramsar designation of IBA complete; ○ Ramsar designation of IBA partial; ■ Ramsar designation of IBA lacking

#### Designation progress:

Areas within three IBAs qualify currently as Ramsar Sites. Designation coverage is complete within two of these, while one has no Ramsar designation as yet.

#### Summary of Important Bird Areas that contain areas which qualify as Ramsar Sites in Armenia

IBA Code	IBA Name	IBA Area (ha)	Ramsar Name	Ramsar Area (ha)	Ramsar Criteria			
					2	4	5	6
<b>Ramsar designation of IBA complete (n=2)</b>								
AM001	Lake Arpi	2000	Lake Arpi	3139	+ + +			
AM005	Lake Sevan	150000	Lake Sevan	489100	+ + +			
<b>Ramsar designation of IBA lacking (n=1)</b>								
AM004	Armash fish-farm	2795		0	+ + +			

#### Threatened species:

Within two of the IBAs selected, six wetland-dependent threatened species occur regularly in significant numbers.

**Summary of the occurrence of threatened species within the selected IBAs**

IBA Code	Black-winged Pratincole <i>Glareola nordmanni</i>	Ferruginous Duck <i>Aythya nyroca</i>	Lesser White fronted Goose <i>Anser erythropus</i>	Marbled Duck <i>Marmaronetta angustirostris</i>	Pygmy Cormorant <i>Phalacrocorax pygmeus</i>	White-headed Duck <i>Oxyura leucocephala</i>	Grand Total
AM004	+	+		+	+	+	5
AM005		+	+	1	1	1	2
Grand Total	1	2	1	1	1	1	7

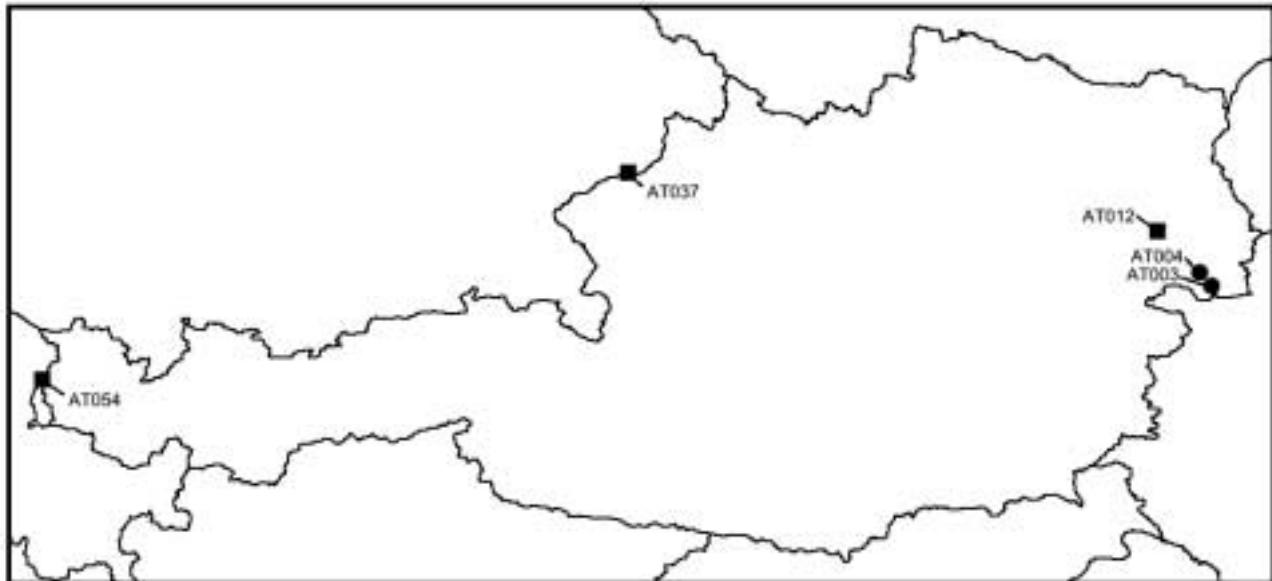

**Site network development:**

Probably <50% of potential IBAs have been identified in Armenia. More wetland IBAs are likely to be found with further survey work.

**Austria**

2 ☺ 0 ☹ 3 ☹

See "Identifying potential Ramsar Sites" for description of site and species selection procedure and method for evaluating adequacy of Ramsar coverage used in this report. See also full details of each site, including bird populations, at <http://www.birdlife.org.uk/sites>

**Location of Important Bird Areas that contain areas which qualify as Ramsar Sites in Austria**

- Ramsar designation of IBA complete; ○ Ramsar designation of IBA partial; ■ Ramsar designation of IBA lacking

**Designation progress:**

Areas within five IBAs qualify currently as Ramsar Sites. Designation coverage is complete within two, while the other three have no Ramsar designation as yet.

**Summary of Important Bird Areas that contain areas which qualify as Ramsar Sites in Austria**

IBA Code	IBA Name	IBA Area (ha)	Ramsar Name	Ramsar Area (ha)	Ramsar Criteria			
					2	4	5	6
<b>Ramsar designation of IBA complete (n=2)</b>

#### Location of Important Bird Areas that contain areas which qualify as Ramsar Sites in Finland

● Ramsar designation of IBA complete; ○ Ramsar designation of IBA partial; ■ Ramsar designation of IBA lacking

#### Designation progress:

Areas within 47 IBAs qualify currently as Ramsar Sites. Designation coverage is complete within four of these and partial with need of expansion in five. Thirty-eight (81%) have no Ramsar designation as yet. The Finnish Government proposes to designate a large number of new Ramsar Sites shortly, which seem to include areas of FI002, FI012, FI017, FI021, FI025, FI030, FI051, FI055, FI057 and FI065.

#### Summary of Important Bird Areas that contain areas which qualify as Ramsar Sites in Finland

IBA Code	IBA Name	IBA Area (ha)	Ramsar Name	Ramsar Area (ha)	Ramsar Criteria		
					2	4	5
<b>Ramsar designation of IBA complete (n=4)</b>							
FI027	Krunnit Archipelago	4579	Krunnit Islands	4436	+	+

\* In contrast to all other countries in this report, national IBA Codes are used since international codes for Germany are in the process of being revised.

### Threatened species:

Within 39 of the IBAs selected, two wetland-dependent threatened species occur regularly in significant numbers.

### Summary of the occurrence of threatened species within the selected IBAs

**Site network development:**

About 98% of wetland IBAs have been identified in Germany based on the criteria considered in this report. The remaining few unidentified possibly include goose roosts in the eastern federal states.

## Greece

7 ☺ 5 ☹ 71 ☹

See "Identifying potential Ramsar Sites" for description of site and species selection procedure and method for evaluating adequacy of Ramsar coverage used in this report. See also full details of each site, including bird populations, at <http://www.birdlife.org.uk/sites>

## Location of Important Bird Areas that contain areas which qualify as Ramsar Sites in Greece

● Ramsar designation of IBA complete; ○ Ramsar designation of IBA partial; ■ Ramsar designation of IBA lacking

## Designation progress:

Areas within 83 IBAs qualify currently as Ramsar Sites. Designation coverage is complete within seven of these and partial with need of expansion in five. Seventy-one (86%) have no Ramsar designation as yet.

## Summary of Important Bird Areas that contain areas which qualify as Ramsar Sites in Greece

**Site network development:**

About 95% of potential IBAs have been identified in Greece. Few other wetland IBAs are likely to be identified based on the criteria considered in this report.

**Greenland (to Denmark)**

8 ☺ 2 ☹ 41 ☹

See "Identifying potential Ramsar Sites" for description of site and species selection procedure and method for evaluating adequacy of Ramsar coverage used in this report. See also full details of each site, including bird populations, at <http://www.birdlife.org.uk/sites>

**Location of Important Bird Areas that contain areas which qualify as Ramsar Sites in Greenland**

● Ramsar designation of IBA complete; ○ Ramsar designation of IBA partial; ■ Ramsar designation of IBA lacking

**Designation progress:**

Areas within 51 IBAs qualify currently as Ramsar Sites. Designation coverage is complete within eight of these and partial with need of expansion in two. Forty-one (80%) have no Ramsar designation as yet. A report issued recently by the Danish Environmental Research Institute (Egevang & Boertmann 2001) proposes: i) the designation of four new Ramsar Sites that would cover the entire areas of GL017, GL018, GL038 and GL053; ii) the enlargement of two existing Ramsar Sites (GL023 and GL055); and iii) the deletion of the only other current Ramsar Site in Greenland (Kuannersuit Kuussuat) owing to its much reduced importance for birds (a site that does not qualify as an IBA). The report also provides revised figures for the sizes of all Ramsar Sites based on GIS analysis.

**Threatened species:**

No wetland-dependent threatened species occur regularly in significant numbers at any of the IBAs selected.

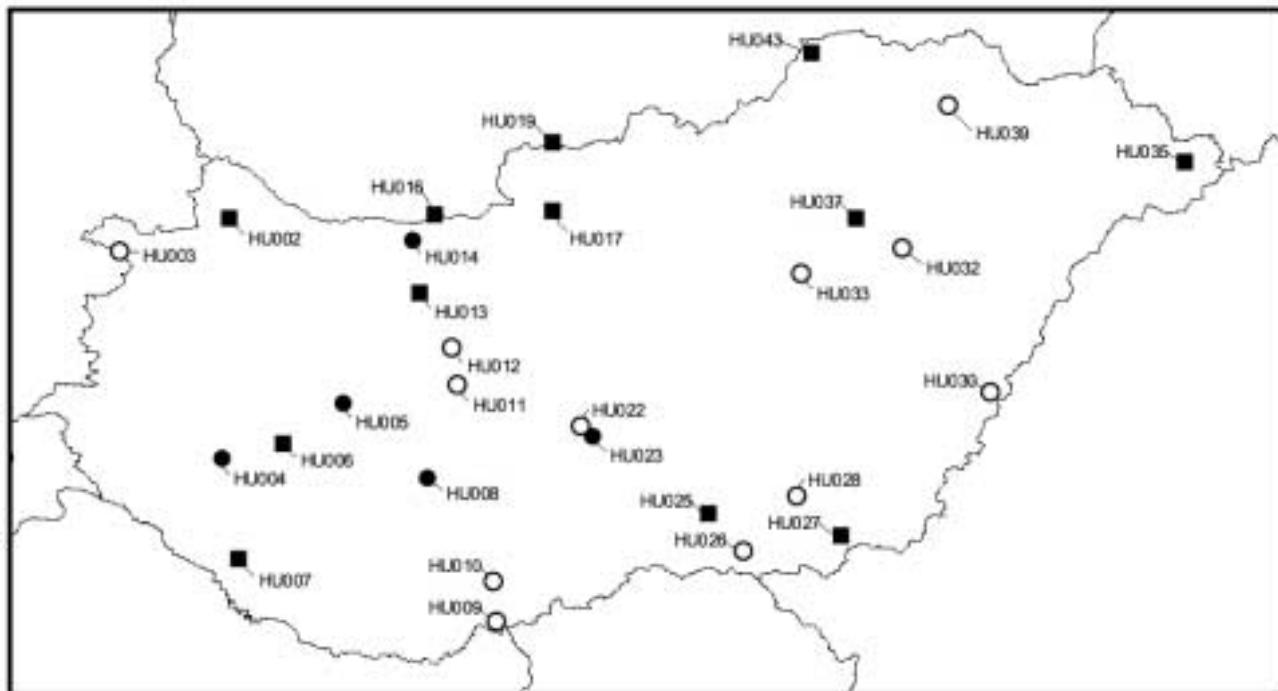

**Site network development:**

About 75% of potential IBAs have been identified in Greenland. In particular, further survey work is likely to find more wetland IBAs within shallow marine areas, since these areas are very important for wintering, moulting and staging seabirds.

**Hungary**

5 ☺ 12 ☺ 12 ☺

See "Identifying potential Ramsar Sites" for description of site and species selection procedure and method for evaluating adequacy of Ramsar coverage used in this report. See also full details of each site, including bird populations, at <http://www.birdlife.org.uk/sites>

**Location of Important Bird Areas that contain areas which qualify as Ramsar Sites in Hungary**

● Ramsar designation of IBA complete; ○ Ramsar designation of IBA partial; ■ Ramsar designation of IBA lacking

**Designation progress:**

Areas within 29 IBAs qualify currently as Ramsar Sites. Designation coverage is complete within five of these and partial with need of expansion in twelve. Twelve (48%) have no Ramsar designation as yet.

**Threatened species:**

Within the IBAs selected, only one site supports a wetland-dependent threatened species regularly in significant numbers (IE131), important for Corncrake (*Crex crex*).

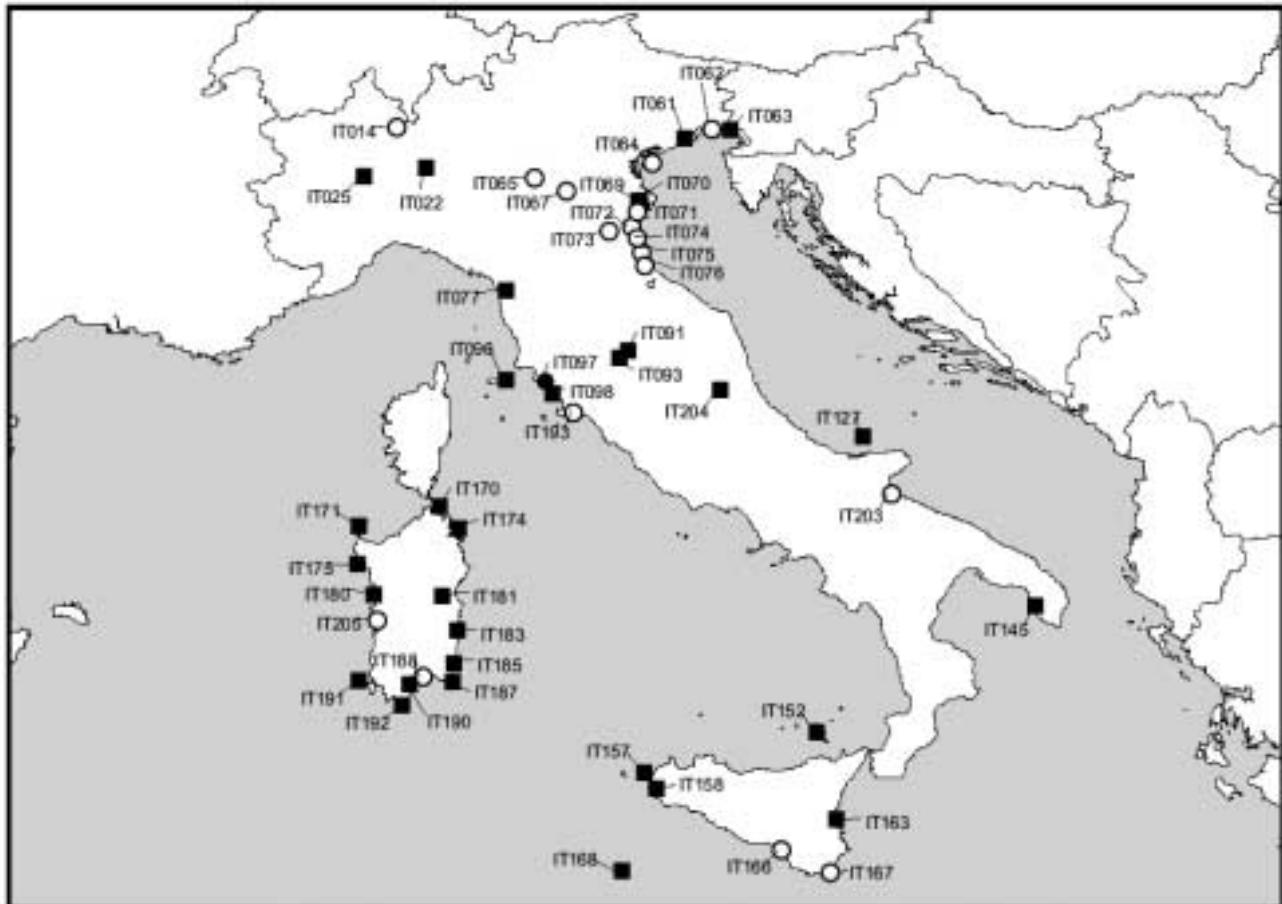

**Site network development:**

About 95% of potential IBAs have been identified in Ireland and few other wetland sites are likely to be identified based on the criteria considered in this report. Thirteen IBAs selected in the initial analysis have been excluded because the qualifying species, mainly geese and Corncrake *Crex crex*, use exclusively non-wetland habitat within the sites (IE012, IE013, IE014, IE015, IE021, IE025, IE031, IE032, IE043, IE044, IE052, IE054 and IE120). Further investigation of the use these species make of these sites and adjacent areas could prove them worthy of Ramsar designation.

**Italy (including Sardinia)**

1 ☺ 17 ☺ 31 ☺

See "Identifying potential Ramsar Sites" for description of site and species selection procedure and method for evaluating adequacy of Ramsar coverage used in this report. See also full details of each site, including bird populations, at <http://www.birdlife.org.uk/sites>

**Location of Important Bird Areas that contain areas which qualify as Ramsar Sites in Italy (including Sardinia)**

● Ramsar designation of IBA complete; ○ Ramsar designation of IBA partial; ■ Ramsar designation of IBA lacking

**Designation progress:**

Areas within 49 IBAs qualify currently as Ramsar Sites. Designation coverage is complete within one of these and partial with need of expansion in 17. Thirty-one (63%) have no Ramsar designation as yet.

**Summary of Important Bird Areas that contain areas which qualify as Ramsar Sites in Italy (including Sardinia)**

**Threatened species:**

No wetland-dependent threatened species occur regularly in significant numbers at any of the IBAs selected.

**Site network development:**

Probably >90% of potential IBAs have been identified in Malta. Few (if any) other wetland IBAs are likely to be identified based on the criteria considered in this report.

See "Identifying potential Ramsar Sites" for description of site and species selection procedure and method for evaluating adequacy of Ramsar coverage used in this report. See also full details of each site, including bird populations, at <http://www.birdlife.org.uk/sites>

#### Location of Important Bird Areas that contain areas which qualify as Ramsar Sites in Moldova

● Ramsar designation of IBA complete; ○ Ramsar designation of IBA partial; ■ Ramsar designation of IBA lacking

#### Designation progress:

Areas within nine IBAs qualify currently as Ramsar Sites. Designation coverage is complete within one of these, while eight have no Ramsar designation as yet.

#### Summary of Important Bird Areas that contain areas which qualify as Ramsar Sites in Moldova

IBA Code	IBA Name	IBA Area (ha)	Ramsar Name	Ramsar Area (ha)	Ramsar Criteria		
					2	4	5
<b>Ramsar designation of IBA complete (n=1)</b>							
MD011	Manta Flood-plain-Beleu	19152	Lower Prut Lakes	19152	+	+	+
<b>Ramsar designation of IBA lacking (n=8)</b>							
MD002	Bazinul Costesti-Stîncă	5900		0	+	+	+
MD003	Balatina	9000		0	+	+	+
MD005	Bazinul Ghidighici	900		0	+	+	+
MD007	Golf Goeni	1500		0	+	+	+
MD008	Lacul Salas	330		0	+	+	+
MD009	Copanca-Talmaz	6000		0	+	+	+
MD010	Bazinul Cuciurgan	6400		0	+	+	+
MD012	Bazinul Taraclia	550		0	+	+	+

#### Threatened species:

Within three of the IBAs selected, nine wetland-dependent threatened species occur regularly, but whether they all occur in significant numbers is unclear owing to a lack of bird census data. Future surveys will probably reveal some of the other IBAs selected support wetland-dependent threatened species regularly.

**Summary of the occurrence of threatened species within the selected IBAs**

IBA Code	Corncrake <i>Crex crex</i>	Dalmatian Pelican <i>Pelecanus</i> <i>crispus</i>	Ferruginous Duck <i>Aythya</i> <i>nyroca</i>	Great Snipe <i>Gallinago</i> <i>media</i>	Greater Spotted Eagle <i>Aquila</i> <i>clanga</i>	Lesser White-fronted Goose <i>Anser</i> <i>erythropus</i>	Pygmy Cormorant <i>Phalacrocorax</i> <i>pygmeus</i>	Red-breasted Goose <i>Branta</i> <i>ruficollis</i>	White-tailed Eagle <i>Haliaeetus</i> <i>albicilla</i>	Grand Total

MD011	+	+	+	+	+	+	+	+	+	9
Total	3	1	3	3	2	3	3	2	3	23

**Site network development:**

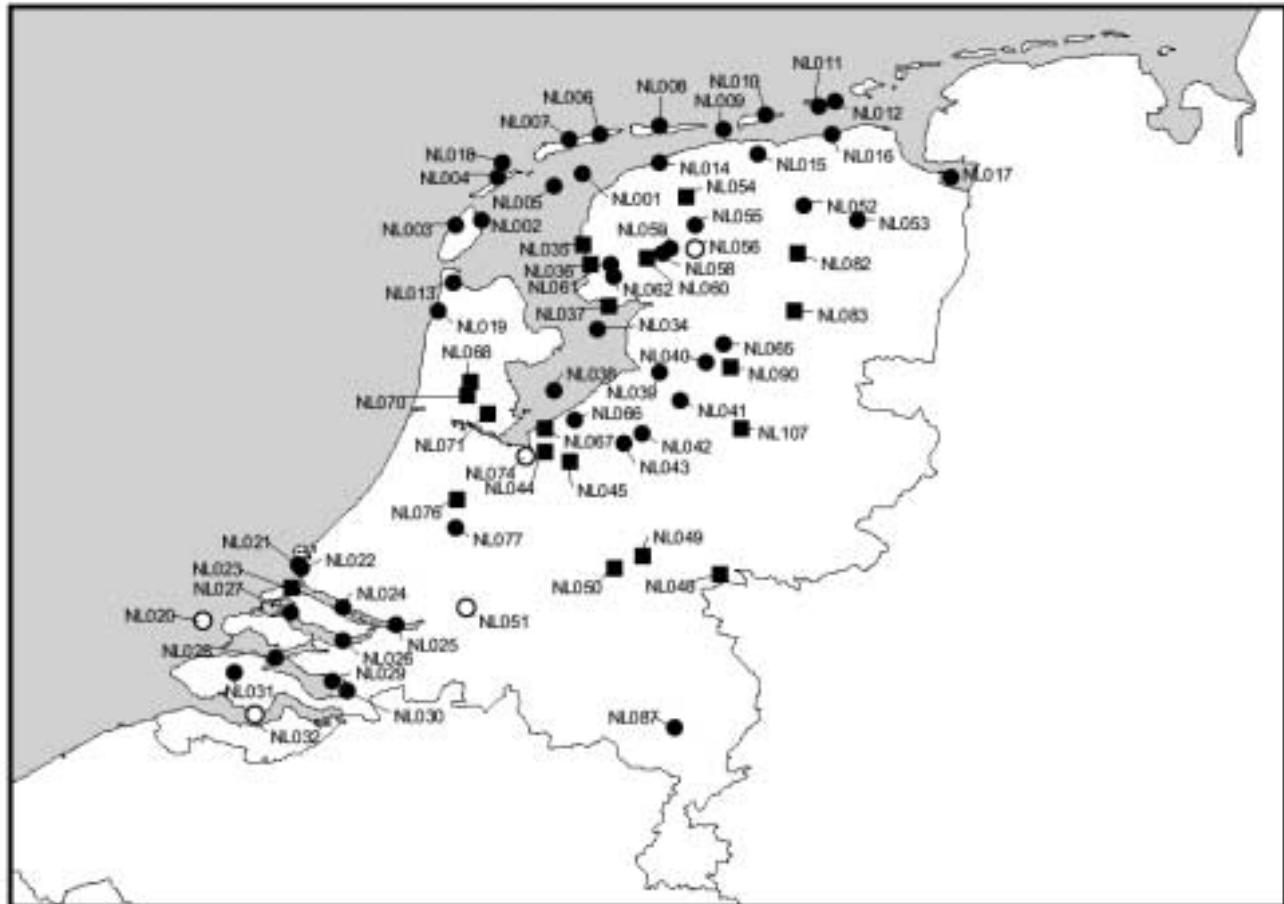

Probably <50% of potential IBAs have been identified in Moldova. With further survey work, more wetland IBAs are likely to be found throughout the country.

## The Netherlands

47 ☺ 5 ☹ 20 ☺

See "Identifying potential Ramsar Sites" for description of site and species selection procedure and method for evaluating adequacy of Ramsar coverage used in this report. See also full details of each site, including bird populations, at <http://www.birdlife.org.uk/sites>

## Location of Important Bird Areas that contain areas which qualify as Ramsar Sites in The Netherlands

● Ramsar designation of IBA complete; ○ Ramsar designation of IBA partial; ■ Ramsar designation of IBA lacking

## Designation progress:

Areas within 72 IBAs qualify currently as Ramsar Sites. Designation coverage is complete within 47 of these and partial with need of expansion in five. Twenty (28%) have no Ramsar designation as yet.

## Summary of Important Bird Areas that contain areas which qualify as Ramsar Sites in The Netherlands

\* Within Osieck & Borggreve (1999) Criterion 4 was only applied to sites used by waterbirds for moulting and pre-migratory fattening.

\*\* Designated as Ramsar Sites by the Dutch Government on 31st March 2000, but as yet not included in The Ramsar List of Wetlands of International Importance

\*\*\* Not considered within Osieck & Borggreve (1999)

#### Threatened species:

No wetland-dependent threatened species occur regularly in significant numbers at any of the IBAs selected.

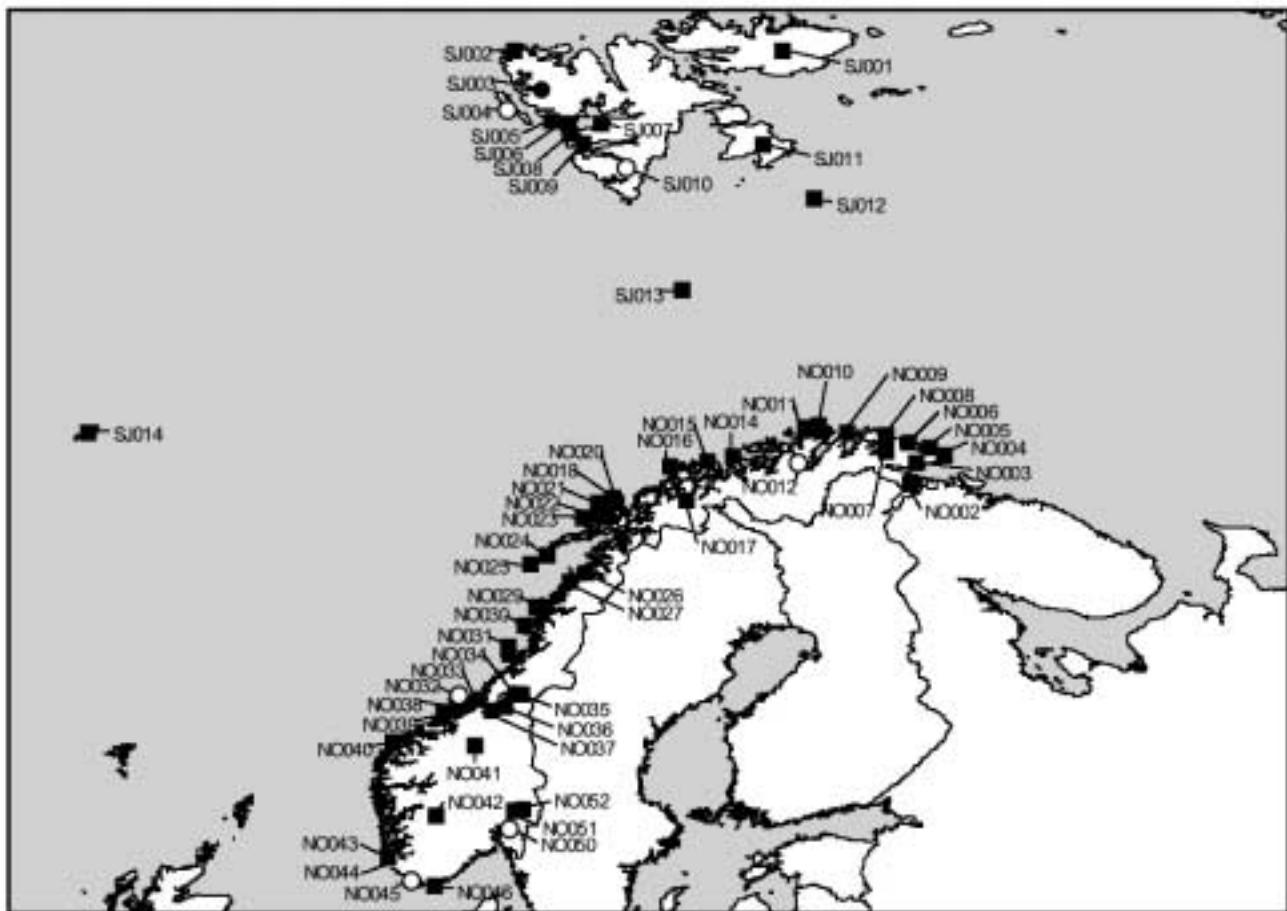

#### Site network development:

The majority of potential Ramsar wetlands have been identified in The Netherlands based on the criteria considered in this report, because of the nation-wide detailed bird census data available. The only notable gap in information refers to nocturnal roosts of waterbirds and in particular those of geese.

**Norway (including Svalbard and Jan Mayen)**

2 ☺ 7 ☹ 52 ☹

See "Identifying potential Ramsar Sites" for description of site and species selection procedure and method for evaluating adequacy of Ramsar coverage used in this report. See also full details of each site, including bird populations, at <http://www.birdlife.org.uk/sites>

**Location of Important Bird Areas that contain areas which qualify as Ramsar Sites in Norway (including Svalbard and Jan Mayen)**

● Ramsar designation of IBA complete; ○ Ramsar designation of IBA partial; ■ Ramsar designation of IBA lacking

**Designation progress:**

Areas within 61 IBAs qualify currently as Ramsar Sites. Designation coverage is complete within two of these and partial with need of expansion in seven. Fifty-two (85%) have no Ramsar designation as yet. The Norwegian Minister of Environment has indicated 14 new Ramsar Sites will be designated shortly, but their overlap with IBAs has not been analysed.

**Site network development:**

About 75% of potential IBAs have been identified in Poland. Other wetland IBAs are likely to be identified based on the criteria considered in this report.

**Portugal (including Azores and Madeira)**

7 ☺ 0 ☹ 21 ☹

See "Identifying potential Ramsar Sites" for description of site and species selection procedure and method for evaluating adequacy of Ramsar coverage used in this report. See also full details of each site, including bird populations, at <http://www.birdlife.org.uk/sites>

**Location of Important Bird Areas that contain areas which qualify as Ramsar Sites in Portugal (including Azores and Madeira)**

- Ramsar designation of IBA complete; ○ Ramsar designation of IBA partial; ■ Ramsar designation of IBA lacking

**Designation progress:**

Areas within 28 IBAs qualify currently as Ramsar Sites. Designation coverage is complete within seven of these, while 21 have no Ramsar designation as yet. The Portuguese government has announced recently that two further areas will be designated as Ramsar Sites shortly, likely to be followed by three more areas, but these do not include any of the 21 undesignated IBAs.

**Site network development:**

About 80% of potential IBAs have been identified in European Russia. In particular, further survey work is likely to find more wetland IBAs in Nenetski, Karelia Republic, Murmansk, Komi Republic and Krasnodarski Kray.

**Slovakia**

1 ☺ 5 ☹ 2 ☹

See "Identifying potential Ramsar Sites" for description of site and species selection procedure and method for evaluating adequacy of Ramsar coverage used in this report. See also full details of each site, including bird populations, at <http://www.birdlife.org.uk/sites>

**Location of Important Bird Areas that contain areas which qualify as Ramsar Sites in Slovakia**

● Ramsar designation of IBA complete; ○ Ramsar designation of IBA partial; ■ Ramsar designation of IBA lacking

**Designation progress:**

Areas within eight IBAs qualify currently as Ramsar Sites. Designation coverage is complete within one of these and partial with need of expansion in five. Two have no Ramsar designation as yet.

**Summary of Important Bird Areas that contain areas which qualify as Ramsar Sites in Slovakia**

IBA Code	IBA Name	IBA Area (ha)	Ramsar Name	Ramsar Area (ha)	Ramsar Criteria 2	4	5	6

SK020	+		1
SK031	+		1
Grand Total	4	1	5

**Site network development:**

About 90% of potential IBAs have been identified in Slovakia. Few other wetland IBAs are likely to be identified based on the criteria considered in this report.

See "Identifying potential Ramsar Sites" for description of site and species selection procedure and method for evaluating adequacy of Ramsar coverage used in this report. See also full details of each site, including bird populations, at <http://www.birdlife.org.uk/sites>

#### Location of Important Bird Areas that contain areas which qualify as Ramsar Sites in Slovenia

● Ramsar designation of IBA complete; ○ Ramsar designation of IBA partial; ■ Ramsar designation of IBA lacking

#### Designation progress:

Areas within eight IBAs qualify currently as Ramsar Sites. Designation coverage is partial with need of expansion in one of these, while the other seven have no Ramsar designation as yet.

#### Summary of Important Bird Areas that contain areas which qualify as Ramsar Sites in Slovenia

IBA Code	IBA Name	IBA Area (ha)	Ramsar Name	Ramsar Area (ha)	Ramsar Criteria		
					2	4	5
<b>Ramsar designation of IBA partial (n=1)</b>							
SI004	Sečovlje Saltworks	850	Sečoveljske soline (Sečovlje Saltpans)	650	+	+	+
<b>Ramsar designation of IBA lacking (n=7)</b>							
SI002	Nanoščica River Basin	1425		0	+		
SI005	Reka Valley	1700		0	+		
SI006	Ljubljansko Moor	14560		0	+		
SI007	Planina Polje	1600		0	+		
SI008	Lake Cerknica	3500		0	+		
SI010	Ribnica Valley	3980		0	+		
SI012	River Drava from Maribor to Središče	8300		0	+	+	+

#### Threatened species:

The Corncrake (*Crex crex*) occurs regularly in significant numbers within SI002, SI005, SI006, SI007, SI008 and SI010. No other wetland-dependent threatened species occurs regularly in significant numbers at any of the IBAs selected.

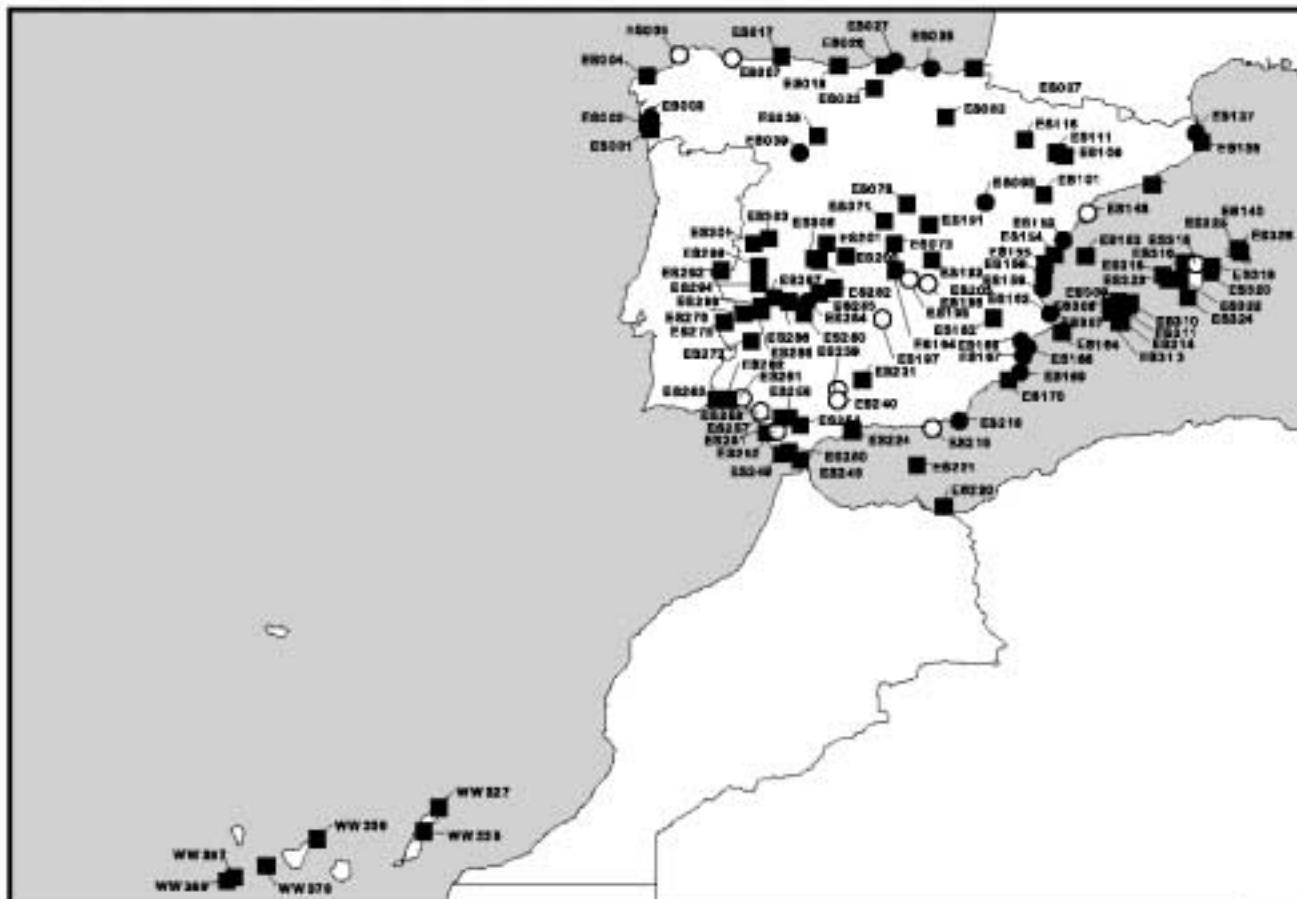

#### Site network development:

Probably >75% of potential IBAs have been identified in Slovenia. Few other wetland IBAs are likely to be identified based on the criteria considered in this report.

**Spain (including the Canary Islands)**

15 ☺ 15 ☹ 83 ☹

See "Identifying potential Ramsar Sites" for description of site and species selection procedure and method for evaluating adequacy of Ramsar coverage used in this report. See also full details of each site, including bird populations, at <http://www.birdlife.org.uk/sites>

**Location of Important Bird Areas that contain areas which qualify as Ramsar Sites in Spain (including the Canary Islands)**

● Ramsar designation of IBA complete; ○ Ramsar designation of IBA partial; ■ Ramsar designation of IBA lacking

**Designation progress:**

Areas within 113 IBAs qualify currently as Ramsar Sites. Designation coverage is complete within 15 of these and partial with need of expansion in another 15. Eighty-three (73%) have no Ramsar designation as yet. The Spanish Ornithological Society (the BirdLife partner in Spain) has suggested priority sites for designation as indicated by asterisks in the table below.

**Summary of Important Bird Areas that contain areas which qualify as Ramsar Sites in Spain (including the Canary Islands)**

**Site network development:**

Probably all potential IBAs have been identified in Spain and the Canary Islands. Hence, very few (if any) other wetland IBAs are likely to be identified based on the criteria considered in this report.

See "Identifying potential Ramsar Sites" for description of site and species selection procedure and method for evaluating adequacy of Ramsar coverage used in this report. See also full details of each site, including bird populations, at <http://www.birdlife.org.uk/sites>

#### Location of Important Bird Areas that contain areas which qualify as Ramsar Sites in Sweden

● Ramsar designation of IBA complete; ○ Ramsar designation of IBA partial; ■ Ramsar designation of IBA lacking

#### Designation progress:

Areas within 52 IBAs qualify currently as Ramsar Sites. Designation coverage is complete within 13 of these and partial with need of expansion in nine. Thirty (71%) have no Ramsar designation as yet.

\* This is the only site in this report identified only under Criterion 4. It is the only Swiss wetland south of the Alps and is a very important refuge for migratory wetland birds crossing this mountain range.

\*\* Sites which qualify under Criterion 5 only in combination with adjacent German areas.

**Threatened species:**

No wetland-dependent threatened species occur regularly in significant numbers at any of the IBAs selected.

**Site network development:**

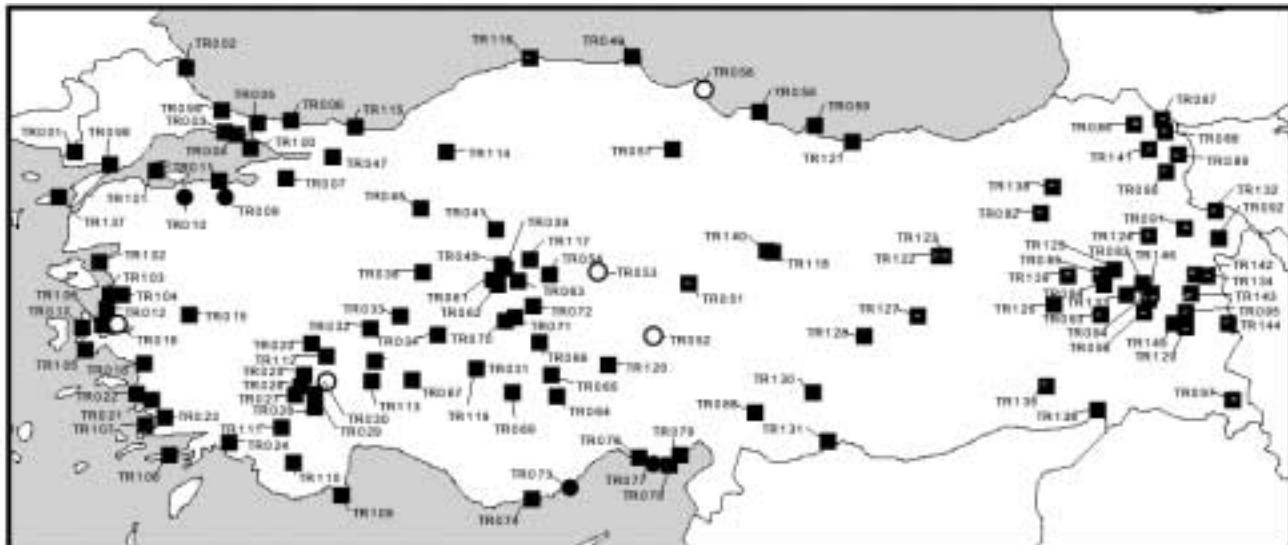

Probably >75% of potential IBAs have been identified in Switzerland. Few other wetland IBAs are likely to be identified based on the criteria considered in this report.

## Turkey

**Site network development:** About 75% of all potential IBAs have been identified in Turkey. Other wetland IBAs are likely to be identified based on the criteria considered in this report, particularly in the east.

See "Identifying potential Ramsar Sites" for description of site and species selection procedure and method for evaluating adequacy of Ramsar coverage used in this report. See also full details of each site, including bird populations, at <http://www.birdlife.org.uk/sites>

#### Location of Important Bird Areas that contain areas which qualify as Ramsar Sites in Ukraine

● Ramsar designation of IBA complete; ○ Ramsar designation of IBA partial; ■ Ramsar designation of IBA lacking

#### Designation progress:

Areas within 121 IBAs qualify currently as Ramsar Sites. Designation coverage is complete within twelve of these and partial with need of expansion in six. One-hundred-and-three (85%) have no Ramsar designation as yet.

#### Summary of Important Bird Areas that contain areas which qualify as Ramsar Sites in Ukraine

\*Provisional determination of the adequacy of Ramsar coverage

#### Threatened species:

Within five of the IBAs selected (UK218, UK247, UK256, UK263 and UK266), one wetland-dependent threatened species (Corncrake *Crex crex*) occurs regularly in significant numbers.

#### Site network development:

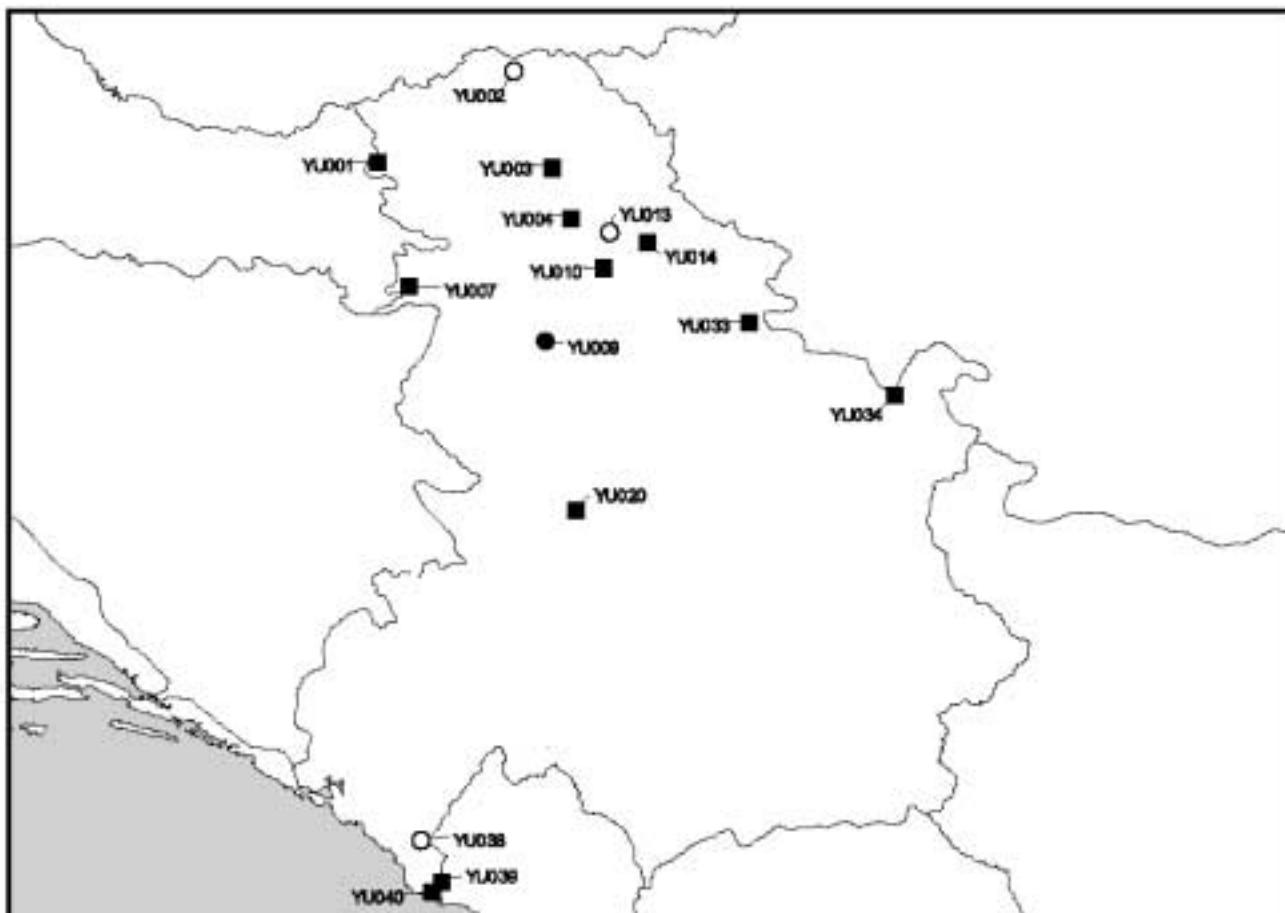

About 95% of potential IBAs have been identified in the United Kingdom, the Channel Islands and the Isle of Man. Few other wetland IBAs are likely to be identified based on the criteria considered in this report.

## Yugoslavia

1 ☺ 3 ☹ 11 ☹

See "Identifying potential Ramsar Sites" for description of site and species selection procedure and method for evaluating adequacy of Ramsar coverage used in this report. See also full details of each site, including bird populations, at <http://www.birdlife.org.uk/sites>

## Location of Important Bird Areas that contain areas which qualify as Ramsar Sites in Yugoslavia

● Ramsar designation of IBA complete; ○ Ramsar designation of IBA partial; ■ Ramsar designation of IBA lacking

**Designation progress:**

Areas within 15 IBAs qualify currently as Ramsar Sites. Designation coverage is complete within one of these and partial with need of expansion in three. Eleven (73%) have no Ramsar designation as yet.

## Summary of Important Bird Areas that contain areas which qualify as Ramsar Sites in Yugoslavia

IBA Code	IBA Name	IBA Area (ha)	Ramsar Name	Ramsar Area (ha)	Ramsar Criteria 2	4	5	6
<b>Ramsar designation of IBA complete (n=1)</b>								
YU009	Obedska Bara	23000	Obedska Bara	17501	+ +			
<b>Ramsar designation of IBA partial (n=3)</b>								
YU002	Subotica Lakes and Sandy Terrain	20000	Ludasko Lake	593	+ +

YU034				+		1
YU038		+	+	+		3
YU040				+		1
Grand Total	1	1	7	6	2	17

**Site network development:**

Probably <75% of potential IBAs have been identified in Yugoslavia. In particular, further survey work is likely to find more wetland IBAs within Montenegro.

## Contact points and acknowledgements

The content of this report is just one of the latest results from the collective effort of a tremendous network of people involved in the European IBA Programme. As such, it would be atomistic and misleading to mention individuals, since the real value and success of the programme results from the collective effort. That acknowledged, some folk have been particularly helpful with the compilation of this particular report and include Ellen Amting, Dieneka Bientema, Tobias Salathé, Nick Davidson, Stela Drucioc, Scott Frazier, Herman Hötker, Baz Hughes, Drazen Kotrosan, Rowena Langston, Szabolcs Nagy, Claire Nivet, Jordi Palau Puigvert, Sara

Sharpe, Kevin Standring and Nicolae Zubcov.

In addition, there is a need to provide contact points for enquiries and further information. For territories listed below please contact the people indicated, otherwise contact Des Callaghan, European Research & Database Manager, BirdLife International, European Division Office, Droevedaalsesteeg 3a, PO Box 127, NL-6700 AC Wageningen, The Netherlands. Tel: + 31 (0) 317 478835; Fax: + 31 (0) 317 478844; E-mail: D.Callaghan@birdlife.agro.nl.

## Appendices

### Appendix 1. Wetland bird species in Europe

The Convention functionally defines waterfowl (a term which, for the purposes of the Ramsar Criteria and Guidelines, is considered to be synonymous with "waterbirds") as "birds ecologically dependent on wetlands" (Article 1.2). This definition thus includes any wetland bird species. At the broad level of taxonomic order these are said to include especially: penguins (Sphenisciformes); divers (Gaviiformes); grebes (Podicipediformes); wetland related pelicans, cormorants, darters and allies (Pelecaniformes); herons, bitterns, storks, ibises and spoonbills (Ciconiiformes); flamingos (Phoenicopteriformes); screamers, swans, geese and ducks (Anseriformes); wetland related raptors (Accipitriformes and Falconiformes); wetland related cranes, rails and allies (Gruiformes); Hoatzin (Opisthoicomiformes); wetland related jacanas, waders (or shorebirds), gulls, skimmers and terns (Charadriiformes); coucals (Cuculiformes) and wetland related owls (Strigiformes). A more accurate list of wetland bird species has not been compiled under the Convention as yet for any geogra-

phic region, but is provided below for Europe for use in this report based on the following definitions:

**Wetland habitat:** Any habitat type included within the Ramsar Classification System for Wetland Type (Appendix 2).

**Species:** Any European bird treated as a full species by Snow & Perrins (1997).

**Wetland bird:** Any species for which a significant proportion of its numbers uses wetland habitat for breeding, feeding, roosting and/or moulting.

**Europe:** see Figure 1.

**Natural range:** The range of a species, excluding any portion that is the result of introduction to the region or a neighbouring region after the year 1800 (taxa introduced before 1800 should have developed local adaptations and so can be regarded as being within their natural range). The natural range includes areas where the taxon does not breed but regularly utilizes resources, such as feeding and moulting areas occupied during non-breeding periods.

**The following includes all wetland bird species whose natural range includes areas of Europe (n=218 species; 42% of all European bird species):**

Red-throated Diver	<i>Gavia stellata</i>	Black Stork	<i>Ciconia nigra</i>
Black-throated Diver	<i>Gavia arctica</i>	White Stork	<i>Ciconia ciconia</i>
Great Northern Diver	<i>Gavia immer</i>	Glossy Ibis	<i>Plegadis falcinellus</i>
White-billed Diver	<i>Gavia adamsii</i>	Spoonbill	<i>Platalea leucorodia</i>
Little Grebe	<i>Tachybaptus ruficollis</i>	Greater Flamingo	<i>Phoenicopterus ruber</i>
Great Crested Grebe	<i>Podiceps cristatus</i>	Mute Swan	<i>Cygnus olor</i>
Red-necked Grebe	<i>Podiceps grisegena</i>	Bewick's Swan	<i>Cygnus columbianus</i>
Slavonian Grebe	<i>Podiceps auritus</i>	Whooper Swan	<i>Cygnus cygnus</i>
Black-necked Grebe	<i>Podiceps nigricollis</i>	Bean Goose	<i>Anser fabalis</i>
Fulmar	<i>Fulmarus glacialis</i>	Pink-footed Goose	<i>Anser brachyrhynchus</i>
Bulwer's Petrel	<i>Bulweria bulwerii</i>	White-fronted Goose	<i>Anser albifrons</i>
Cory's Shearwater	<i>Calonectris diomedea</i>	Lesser White-fronted Goose	<i>Anser erythropus</i>
Great Shearwater	<i>Puffinus gravis</i>	Greylag Goose	<i>Anser anser</i>
Sooty Shearwater	<i>Puffinus griseus</i>	Barnacle Goose	<i>Branta leucopsis</i>
Manx Shearwater	<i>Puffinus puffinus</i>	Brent Goose	<i>Branta bernicla</i>
Yelkouan Shearwater	<i>Puffinus yelkouan</i>	Red-breasted Goose	<i>Branta ruficollis</i>
Balearic Shearwater	<i>Puffinus mauritanicus</i>	Ruddy Shelduck	<i>Tadorna ferruginea</i>
Little Shearwater	<i>Puffinus assimilis</i>	Shelduck	<i>Tadorna tadorna</i>
White-faced Petrel	<i>Pelagodroma marina</i>	Wigeon	<i>Anas penelope</i>
Storm Petrel	<i>Hydrobates pelagicus</i>	Gadwall	<i>Anas strepera</i>
Leach's Petrel	<i>Oceanodroma leucorhoa</i>	Eurasian Teal	<i>Anas crecca</i>
Madeiran Petrel	<i>Oceanodroma castro</i>	Mallard	<i>Anas platyrhynchos</i>
Gannet	<i>Sula bassana</i>	Pintail	<i>Anas acuta</i>
Cormorant	<i>Phalacrocorax carbo</i>	Garganey	<i>Anas querquedula</i>
Shag	<i>Phalacrocorax aristotelis</i>	Shoveler	<i>Anas clypeata</i>
Pygmy Cormorant	<i>Phalacrocorax pygmeus</i>	Marbled Duck	<i>Marmaronetta angustirostris</i>
White Pelican	<i>Pelecanus onocrotalus</i>	Red-crested Pochard	<i>Netta rufina</i>
Dalmatian Pelican	<i>Pelecanus crispus</i>	Pochard	<i>Aythya ferina</i>
Bittern	<i>Botaurus stellaris</i>	Ferruginous Duck	<i>Aythya nyroca</i>
Little Bittern	<i>Ixobrychus minutus</i>	Tufted Duck	<i>Aythya fuligula</i>
Night Heron	<i>Nycticorax nycticorax</i>	Scaup	<i>Aythya marila</i>
Squacco Heron	<i>Ardeola ralloides</i>	Eider	<i>Somateria mollissima</i>
Cattle Egret	<i>Bubulcus ibis</i>	King Eider	<i>Somateria spectabilis</i>
Little Egret	<i>Egretta garzetta</i>	Steller's Eider	<i>Polyicta stelleri</i>
Great White Egret	<i>Egretta alba</i>	Harlequin Duck	<i>Histrionicus histrionicus</i>
Grey Heron	<i>Ardea cinerea</i>	Long-tailed Duck	<i>Clangula hyemalis</i>
Purple Heron	<i>Ardea purpurea</i>	Common Scoter	<i>Melanitta nigra</i>

Velvet Scoter	<i>Melanitta fusca</i>	Curlew	<i>Numenius arquata</i>
Barrow's Goldeneye	<i>Bucephala islandica</i>	Spotted Redshank	<i>Tringa erythropus</i>
Goldeneye	<i>Bucephala clangula</i>	Redshank	<i>Tringa totanus</i>
Smew	<i>Mergus albellus</i>	Marsh Sandpiper	<i>Tringa stagnatilis</i>
Red-breasted Merganser	<i>Mergus serrator</i>	Greenshank	<i>Tringa nebularia</i>
Goosander	<i>Mergus merganser</i>	Green Sandpiper	<i>Tringa ochropus</i>
White-headed Duck	<i>Oxyura leucocephala</i>	Wood Sandpiper	<i>Tringa glareola</i>
White-tailed Eagle	<i>Haliaeetus albicilla</i>	Terek Sandpiper	<i>Xenus cinereus</i>
Marsh Harrier	<i>Circus aeruginosus</i>	Common Sandpiper	<i>Actitis hypoleucos</i>
Montagu's Harrier	<i>Circus pygargus</i>	Turnstone	<i>Arenaria interpres</i>
Lesser Spotted Eagle	<i>Aquila pomarina</i>	Red-necked Phalarope	<i>Phalaropus lobatus</i>
Greater Spotted Eagle	<i>Aquila clanga</i>	Grey Phalarope	<i>Phalaropus fulicarius</i>
Osprey	<i>Pandion haliaetus</i>	Pomarine Skua	<i>Stercorarius pomarinus</i>
Eleonora's Falcon	<i>Falco eleonorae</i>	Arctic Skua	<i>Stercorarius parasiticus</i>
Water Rail	<i>Rallus aquaticus</i>	Long-tailed Skua	<i>Stercorarius longicaudus</i>
Spotted Crake	<i>Porzana porzana</i>	Great Skua	<i>Stercorarius skua</i>
Little Crake	<i>Porzana parva</i>	Great Black-headed Gull	<i>Larus ichthyaetus</i>
Baillon's Crake	<i>Porzana pusilla</i>	Mediterranean Gull	<i>Larus melanocephalus</i>
Corncrake	<i>Crex crex</i>	Little Gull	<i>Larus minutus</i>
Moorhen	<i>Gallinula chloropus</i>	Sabine's Gull	<i>Larus sabini</i>
Purple Gallinule	<i>Porphyrio porphyrio</i>	Black-headed Gull	<i>Larus ridibundus</i>
Coot	<i>Fulica atra</i>	Slender-billed Gull	<i>Larus genei</i>
Crested Coot	<i>Fulica cristata</i>	Audouin's Gull	<i>Larus audouinii</i>
Crane	<i>Grus grus</i>	Common Gull	<i>Larus canus</i>
Demoiselle Crane	<i>Anthropoides virgo</i>	Lesser Black-backed Gull	<i>Larus fuscus</i>
Oystercatcher	<i>Haematopus ostralegus</i>	Herring Gull	<i>Larus argentatus</i>
Black-winged Stilt	<i>Himantopus himantopus</i>	Yellow-legged Gull	<i>Larus cachinnans</i>
Avocet	<i>Recurvirostra avosetta</i>	Armenian Gull	<i>Larus armenicus</i>
Collared Pratincole	<i>Glareola pratincola</i>	Iceland Gull	<i>Larus glaucopterus</i>
Black-winged Pratincole	<i>Glareola nordmanni</i>	Glaucous Gull	<i>Larus hyperboreus</i>
Little Ringed Plover	<i>Charadrius dubius</i>	Great Black-backed Gull	<i>Larus marinus</i>
Ringed Plover	<i>Charadrius hiaticula</i>	Ross's Gull	<i>Rhodostethia rosea</i>
Kentish Plover	<i>Charadrius alexandrinus</i>	Kittiwake	<i>Rissa tridactyla</i>
Greater Sand Plover	<i>Charadrius leschenaultii</i>	Ivory Gull	<i>Pagophila eburnea</i>
Caspian Plover	<i>Charadrius asiaticus</i>	Gull-billed Tern	<i>Gelochelidon nilotica</i>
Dotterel	<i>Charadrius morinellus</i>	Caspian Tern	<i>Sterna caspia</i>
Golden Plover	<i>Pluvialis apricaria</i>	Sandwich Tern	<i>Sterna sandvicensis</i>
Grey Plover	<i>Pluvialis squatarola</i>	Roseate Tern	<i>Sterna dougallii</i>
Spur-winged Plover	<i>Hoplopterus spinosus</i>	Common Tern	<i>Sterna hirundo</i>
Red-wattled Plover	<i>Hoplopterus indicus</i>	Arctic Tern	<i>Sterna paradisaea</i>
Sociable Plover	<i>Chettusia gregaria</i>	Little Tern	<i>Sterna albifrons</i>
White-tailed Plover	<i>Chettusia leucura</i>	Whiskered Tern	<i>Chlidonias hybridus</i>
Lapwing	<i>Vanellus vanellus</i>	Black Tern	<i>Chlidonias niger</i>
Knot	<i>Calidris canutus</i>	White-winged Black Tern	<i>Chlidonias leucopterus</i>
Sanderling	<i>Calidris alba</i>	Guillemot	<i>Uria aalge</i>
Little Stint	<i>Calidris minuta</i>	Brünnich's Guillemot	<i>Uria lomvia</i>
Temminck's Stint	<i>Calidris temminckii</i>	Razorbill	<i>Alca torda</i>
Curlew Sandpiper	<i>Calidris ferruginea</i>	Black Guillemot	<i>Cephus grylle</i>
Purple Sandpiper	<i>Calidris maritima</i>	Little Auk	<i>Alle alle</i>
Dunlin	<i>Calidris alpina</i>	Puffin	<i>Fratercula arctica</i>
Broad-billed Sandpiper	<i>Limicola falcinellus</i>	Brown Fish Owl	<i>Ketupa zeylonensis</i>
Ruff	<i>Philomachus pugnax</i>	Short-eared Owl	<i>Asio flammeus</i>
Jack Snipe	<i>Lymnocryptes minimus</i>	White-breasted Kingfisher	<i>Halcyon smyrnensis</i>
Snipe	<i>Gallinago gallinago</i>	Kingfisher	<i>Alcedo atthis</i>
Great Snipe	<i>Gallinago media</i>	Pied Kingfisher	<i>Ceryle rudis</i>
Pintail Snipe	<i>Gallinago stenura</i>	Shore Lark	<i>Eremophila alpestris</i>
Black-tailed Godwit	<i>Limosa limosa</i>	Sand Martin	<i>Riparia riparia</i>
Bar-tailed Godwit	<i>Limosa lapponica</i>	Pechora Pipit	<i>Anthus gustavi</i>
Whimbrel	<i>Numenius phaeopus</i>	Red-throated Pipit	<i>Anthus cervinus</i>
Slender-billed Curlew	<i>Numenius tenuirostris</i>	Rock Pipit	<i>Anthus petrosus</i>

Water Pipit	<i>Anthus spinoletta</i>	Moustached Warbler	<i>Acrocephalus melanopogon</i>
Yellow Wagtail	<i>Motacilla flava</i>	Aquatic Warbler	<i>Acrocephalus paludicola</i>
Citrine Wagtail	<i>Motacilla citreola</i>	Sedge Warbler	<i>Acrocephalus schoenobaenus</i>
Grey Wagtail	<i>Motacilla cinerea</i>	Paddyfield Warbler	<i>Acrocephalus agricola</i>
Pied Wagtail	<i>Motacilla alba</i>	Marsh Warbler	<i>Acrocephalus palustris</i>
Dipper	<i>Cinclus cinclus</i>	Reed Warbler	<i>Acrocephalus scirpaceus</i>
Bluethroat	<i>Luscinia svecica</i>	Great Reed Warbler	<i>Acrocephalus arundinaceus</i>
Cetti's Warbler	<i>Cettia cetti</i>	Bearded Tit	<i>Panurus biarmicus</i>
Fan-tailed Warbler	<i>Cisticola juncidis</i>	Penduline Tit	<i>Remiz pendulinus</i>
Lanceolated Warbler	<i>Locustella lanceolata</i>	Dead Sea Sparrow	<i>Passer moabiticus</i>
River Warbler	<i>Locustella fluviatilis</i>	Yellow-breasted Bunting	<i>Emberiza aureola</i>
Savi's Warbler	<i>Locustella luscinioides</i>	Reed Bunting	<i>Emberiza schoeniclus</i>

## Appendix 2. Ramsar Classification System for Wetland Type

### Marine/Coastal Wetlands

- **Permanent shallow marine waters** in most cases less than six metres deep at low tide; includes sea bays and straits.
- **Marine subtidal aquatic beds**; includes kelp beds, sea-grass beds, tropical marine meadows.
- **Coral reefs**.
- **Rocky marine shores**; includes rocky offshore islands, sea cliffs.
- **Sand, shingle or pebble shores**; includes sand bars, spits and sandy islets; includes dune systems and humid dune slacks.
- **Estuarine waters**; permanent water of estuaries and estuarine systems of deltas.
- **Intertidal mud**, sand or salt flats.
- **Intertidal marshes**; includes salt marshes, salt meadows, saltings, raised salt marshes; includes tidal, brackish and freshwater marshes.
- **Intertidal forested wetlands**; includes mangrove swamps, nipah swamps and tidal freshwater swamp forests.
- **Coastal brackish/saline lagoons**; brackish to saline lagoons with at least one relatively narrow connection to the sea.
- **Coastal freshwater lagoons**; includes freshwater delta lagoons.
- **Karst and other subterranean hydrological systems**; marine/coastal.

### Inland Wetlands

- **Permanent inland deltas**.
- **Permanent rivers/streams/creeks**; includes waterfalls.
- **Seasonal/intermittent/irregular rivers/streams/creeks**.
- **Permanent freshwater lakes** (over 8 ha); includes large oxbow lakes.
- **Seasonal/intermittent freshwater lakes** (over 8 ha); includes floodplain lakes.
- **Permanent saline/brackish/alkaline lakes**.
- **Seasonal/intermittent saline/brackish/alkaline lakes and flats**.
- **Permanent saline/brackish/alkaline marshes/pools**.
- **Seasonal/intermittent saline/brackish/alkaline marshes/pools**.
- **Permanent freshwater marshes/pools**; ponds (below 8 ha), marshes and swamps on inorganic soils; with emergent vegetation water-logged for at least most of the growing season.
- **Seasonal/intermittent freshwater marshes/pools** on inorganic

soils; includes sloughs, potholes, seasonally flooded meadows, sedge marshes.

- **Non-forested peatlands**; includes shrub or open bogs, swamps, fens.
- **Alpine wetlands**; includes alpine meadows, temporary waters from snowmelt.
- **Tundra wetlands**; includes tundra pools, temporary waters from snowmelt.
- **Shrub-dominated wetlands**; shrub swamps, shrub-dominated freshwater marshes, shrub carr, alder thicket on inorganic soils.
- **Freshwater, tree-dominated wetlands**; includes freshwater swamp forests, seasonally flooded forests, wooded swamps on inorganic soils.
- **Forested peatlands**; peatswamp forests.
- **Freshwater springs**; oases.
- **Geothermal wetlands**.
- **Karst and other subterranean hydrological systems**; inland.

Note: "floodplain" is a broad term used to refer to one or more wetland types. Some examples of floodplain wetlands are seasonally inundated grassland (including natural wet meadows), shrublands, woodlands and forests. Floodplain wetlands are not listed as a specific wetland type herein.

### Human-made wetlands

- **Aquaculture** (e.g., fish/shrimp) **ponds**.
- **Ponds**; includes farm ponds, stock ponds, small tanks; (generally below 8 ha).
- **Irrigated land**; includes irrigation channels and rice fields.
- **Seasonally flooded agricultural land** (including intensively managed or grazed wet meadow or pasture).
- **Salt exploitation sites**; salt pans, salines, etc.
- **Water storage areas**; reservoirs/barrages/dams/impoundments (generally over 8 ha).
- **Excavations**; gravel/brick/clay pits; borrow pits, mining pools.
- **Wastewater treatment areas**; sewage farms, settling ponds, oxidation basins, etc.
- **Canals and drainage channels, ditches**.
- **Karst and other subterranean hydrological systems**, human-made.

# BirdLife in Europe

In Europe, the BirdLife International Partnership works in more than 40 countries.

The European IBA Programme is coordinated by the European Division of BirdLife International.
