Global IUCN Red List Category —

Criteria —

*Calidris minuta* breeds in the arctic north of Norway and Russia, with Europe accounting for less than half of its global breeding range. Although estimates of its European breeding population vary widely, it is probably relatively large (as many as 460,000 pairs), and was stable between 1970–1990. Although there were fluctuations in Norway during 1990–2000, the stronghold population in Russia was stable, and the species probably remained stable overall. Consequently, it is provisionally evaluated as Secure.
