Accipiter gentilis is a widespread resident across most of Europe, which accounts for less than half of its global range. Its European breeding population is large (>160,000 pairs), and increased substantially between 1970–1990. Although there were declines in several countries during 1990–2000, these were more than compensated for by positive trends elsewhere—notably in the Russian stronghold—and the species underwent a moderate increase overall. Consequently, it is evaluated as Secure.

Country	Breeding pop. size (pairs)	Year(s)	Trend	Mag.%	References
Albania	(100 – 300)	96–02	(–)	(20–29)
