Podiceps nigricollis is a widespread but patchily distributed breeder across much of Europe, which accounts for less than a quarter of its global breeding range. Its European breeding population is relatively small (<96,000 pairs), but underwent a large increase between 1970–1990. Although there were declines in a number of countries—most notably Romania—during 1990–2000, key populations in Russia and Ukraine were stable, and the species declined only slightly overall. Consequently, it is evaluated as Secure.
