*Acrocephalus agricola* is a summer visitor to the eastern European countries adjoining the Black Sea, with Europe accounting for a tiny proportion of its global breeding range. Its European breeding population is large (>470,000 pairs), and increased between 1970–1990. Although the small population in Turkey declined during 1990–2000, key populations in Romania and Russia were stable or increased respectively, and the species probably increased slightly overall. Consequently, it is provisionally evaluated as Secure.

Country	Breeding pop. size (pairs)	Year(s)	Trend	Mag. %	References
Armenia	50 – 250	99-02	+	20-29	10
Bulgaria	<b>45 – 70</b>	96-00	0	0-9
