Acrocephalus dumetorum is a widespread summer visitor to central Russia and adjoining areas of northern and central Europe, which accounts for less than half of its global breeding range. Its European breeding population is very large (>2,000,000 pairs), and was stable between 1970–1990. The stronghold population in Russia remained stable during 1990–2000, with trends also stable or increasing elsewhere in Europe, and consequently the species is evaluated as Secure.
