**Criteria** —

*Anthus campestris* is a fairly widespread summer visitor to much of Europe, which accounts for less than half of its global breeding range. Its European breeding population is very large (>1,000,000 pairs), but underwent a large decline between 1970–1990. Although trends were not available for key populations in Spain and Russia during 1990–2000, the species declined across much of its European range—including the sizeable population in Turkey—and probably underwent a moderate decline (>10%) overall. Consequently, it is provisionally evaluated as Declining.
