Fringilla montifringilla is a widespread breeder in Fennoscandia and northern Russia, but also occurs very patchily farther south, with Europe accounting for less than half of its global range. Its European breeding population is extremely large (>13,000,000 pairs), and was stable between 1970–1990. This trend continued during 1990–2000, with all European populations—including the key northern ones – remaining stable. Consequently, the species is evaluated as Secure.

Country	Breeding pop. size (pairs)	Year(s)	Trend	Mag. %	References
Belarus	0 – 10	97–00	?	–
